Account & Authentication

Sign-In Options

Users access the **Sign in to Bad Golf** modal from the Stats tab (Account section) or when joining a round.

Sign-in methods:

- **Continue with Google** — OAuth sign-in via Google account
- **Continue with Apple** — sign in with your Apple ID (working again as of v939; it had been showing a "not live yet" message)
- **Email & password** — standard email/password authentication

Saved passwords work now. The credential fields are a real form with proper autofill hints, so iOS offers **Save Password**, **Sign in** is a submit button (the keyboard's **Go** key signs you in), and your last successful email is pre-filled. *A password saved inside the iOS app won't be offered on the public website, and vice versa — they're separate to your phone's password manager.*

You can close the sign-in screen. If you opened sign-in yourself from inside the app, it has a **×**, a backdrop tap and Escape. Only the two genuine launch gates (first boot, and right after signing out) hold you there.

Account creation:

- Tap **Create account** on the sign-in modal
- Enter email and password (minimum 6 characters)
- Confirm the name you'll play as (see below)

Requirements: iPhone/iPad on **iOS 15 or newer**. Bad Golf is also live on **Google Play** — the invite links include both stores, since the sender can't know which phone you carry.

Sharing a phone. Signing out clears the cached roster, friends and profile data, so the next person to sign in never sees — or absorbs — the previous account's players and history.

Signed out means nothing loads from the cloud. A device that hasn't signed in reads only what's stored on that phone. It used to be able to pick up a shared, app-wide list of recent rounds — everybody's rounds — and even prune its own history against it. Anything you save while signed out is written to your own account on the first sync after you sign in.

"You'll Play As..." — Confirming Your Name

Signing up with Google or Apple used to silently create your player from the legal name on that account, which is often not what your crew calls you. Now the app shows that name in an **editable** prompt:

You'll play as... This is the name your crew sees on scorecards and leaderboards. Change it if they know you by something else.

Fix it here and you avoid becoming a second, empty duplicate of yourself in everyone's roster.

Claiming the Player Your Crew Already Made for You

If your buddies added you as a guest before you signed up, the app offers to hand you that history on first sign-in:

- The modal reads **"Is one of these you?"** — *"These are players the crew already added who haven't joined yet. If one is you, tap it to claim that history."*
- Buttons: **"I'm not listed — create my player"** and **"Decide later."**
- The match is decided by **email** first. If the guest entry has no email, it's only offered when you've actually shared a scorecard with it, and the prompt shows the round count so you can confirm. A stranger's entry with history you never played in is never offered, and if two entries could match, neither is.

Host-initiated claims. A host can hand a guest their history directly: tap the guest anywhere (leaderboard, Home, Crew) → their profile → **"Invite to claim these rounds."** It texts them a one-time link if the host has their number, otherwise it opens the share sheet. When they open it and sign in they see something like *"Brian Myers — 8 rounds, −\$40 lifetime. Claiming moves those rounds, that handicap and those winnings onto your account."* **Money rides along with the rounds.** The button only appears for guests with no email on record, and the app refuses to mint a claim link for a name that already belongs to a registered user.

Joining From an Invite Link (Zero Typing at the Tee Box)

If someone added you at the first tee and sent you the link, signing in gives you **one confirmation** — e.g. *"You are set up as Brian Myers, handicap 12"* — and you're in, using the name and handicap the host entered. No name prompt, no handicap prompt, no phone prompt.

If the link isn't tied to a specific person, you get a **"Which player are you?"** picker listing the round's players. Slots already linked to another account are greyed out and can't be picked. There's also **"I'm someone else"** and **"None of these — I'm new"** (which runs normal signup). An account that already has a linked player is never renamed by a link.

If a claim fails, the app now says why — whether the slot is already tied to one of *your* other logins (naming the email you're signed in as) or to somebody else's — and opens the event anyway. *This is the classic "the invite just dumps me on the home screen" complaint, and the usual cause is a duplicate account.*

"I'm in the tournament but I can't see it" — the fix is the invite link

A player added to an event **by name only** can be scored normally by whoever holds the card, but until that spot is tied to an account, **the event never appears on their phone and the round never lands in their own history or stats.** They aren't broken and nothing is lost — the spot simply has no account attached to it yet.

The cure is the invite link, not rebuilding the carts. Open the event → **Invite** → send that player their own link. They sign in, tap their name, and the spot, the handicap and every round

already played on it stay attached. A general event link lands everyone on the *"tap your name"* claim page and works just as well.

Older advice to "rebuild the groups and they'll link up" is worse: it only works at cart-build time, it needs the commissioner, and it does nothing at all if the player doesn't have an account yet.

Handicap Ask at Sign-Up (and the "TEMP" Badge)

New players are asked for their handicap the first time they sign in — **including Google and Apple sign-ins**. It's optional: tap **"Skip"** and you're never nagged again.

- Whatever you type is treated as a **placeholder**, not a real index, and everywhere it appears it's marked **TEMP**.
- Your **Handicap Index** tile shows the number with a **"TEMP"** badge instead of a bare **"—"**.
- Round setup shows a small **"TEMP"** pill beside a player's HCP box whenever that handicap isn't a real established index.
- The **Share handicap** text and the **Times** tee-time player picker append a plain-text **"(TEMP)"** marker.
- **The Crew leaderboard deliberately never shows a TEMP number** — it shows a real computed index or **"N/A"**. That's the anti-sandbagging rule.
- The Info tab has an explainer card: **"The 'TEMP' badge"**.

Your index replaces the placeholder automatically as soon as you have real rounds.

Phone Number (Optional, Never a Login)

New-user setup asks for a phone number once, right after the handicap question, with the reason on screen: *this is how the guys you play with text you a round invite that opens straight into the app*.

There is no SMS login. Signing in is email, Google or Apple only. The number is only ever used to reach you — settle-up texts, tee-time invites, claim links. You can add or change it later in Edit profile.

Profile Editing

Two ways in: **Home** → **Account card** → **Edit profile**, or tap your profile photo / the handicap box on the Stats tab.

The Account card lists **Edit profile** → **Sign out** → **Delete account**.

What you can edit:

- **Profile photo** — tap **"Add / change photo"** to upload an image from your device; crew sees it as your avatar
- **Display name** — first and last name (32-character limit)
- **Email** — view the address on the account. If you used Apple's *Hide My Email*, this reads **"Signed in with Apple"** rather than a scrambled relay address
- **Password** — New password + Update password (email sign-in only; the fields sit below the fold — the modal scrolls)

- **Phone number** — auto-dashes as you type (e.g. 555-123-4567); used for text settle-up and invites
- **Home course** — see [Your Home Course](#) below. **Choose / Change** and **Clear** (Clear asks first)
- **Gender (for handicap rating/slope)** — a **Male / Female** picker. Women golfers are automatically scored against each tee's **women's** rating/slope (when the course has them) so net bets and handicaps are fair. Men's numbers are used by default if gender is unset.

Crew photo / avatar visibility:

- Your photo displays as a small circle avatar in crew lists, live leaderboards, and the highlights feed
- If no photo is set, the system shows a "?" placeholder — and your own row carries a small **camera badge** nudging you to add one, which disappears the moment you do
- Names can't contain **<** or **>** (a security rule — no real name is affected)

Your profile is private now. Every signed-in account used to be able to read every other account's full profile row — phone number, clubs, tracked shots, role. That's closed. You see your own row; everyone else sees only what's needed to show your **name, avatar and handicap** on a leaderboard, in friend search, or on a round you're both in. **Your phone number and email are no longer readable by other players.** Admin user-management screens are unchanged.

If names ever come up blank in friend search or on a leaderboard for a non-admin, that's the symptom of this rule biting — a denied read comes back as an empty list rather than an error. Four accounts still on builds older than v991 will lose cross-user name lookup until they update the app.

Forms Remember What You Were Typing

Every editor in the app — round setup, the rating/slope editor, the pars/stroke-index editor, the add-past-round grid, tournament day config, edit-name — **auto-restores what you had typed** if you get interrupted.

- Leave a form half-filled, take a call, come back, and reopening that screen refills it with a toast reading **"←Restored what you were typing."**
- Auto-restore only applies **within 30 minutes**, only to text boxes (not dropdowns), never overwrites a field the screen already filled in, and never refills search or filter boxes.
- Tapping into an older field still recovers drafts up to **12 hours** old.

What is deliberately NOT remembered: the "new tournament" setup fields (name, team names, location and settings) and **your game selections**. A brand-new round or tournament always starts clean. Per-game option values — stakes, formats, allowances — *are* remembered, so switching a game back on recalls what you last played it for.

Duplicate Accounts — the #1 Support Cause

If a player has two logins (say Google sign-in and email/password), their tournament slots, rounds and money can be pointed at one account while they sign in on the other. Symptoms: "my rounds don't show up", "the invite dumps me on Home", "my handicap is different on my iPad".

The fix is an **admin account merge** (see Admin → User Management). Afterwards the player must sign in with the surviving login only. A merge repoints tournament slots, round players, invites, push tokens, stats and friendships, unions the score histories, and **recomputes the handicap index off the merged history** — which can move it (one merge took an index from 4.6 to 5.2). Rounds already played are not re-settled at the new index.

Getting Around the App

The bottom bar has six slots, and two of them change as you play:

Home · Rounds · ****Play**** · Crew · Bets · More

- **Home** — your dashboard. While a round is live and you're on the scoring screen, this first slot becomes **Score** instead.
- **Rounds** — open rounds, scheduled rounds, your saved round history and round templates. (*This tab used to be called Events.*)
- **The middle button** reads **Play** normally and **Round** while a round is live. It used to be the Bad Golf logo artwork; since v1030 it's the word, because nobody knew what the logo did.
- **Crew** — friends, roster, the crew message board and a **Live now** list you can spectate from.
- **Bets** — the money screen: settle-up, standings, the per-game breakdown and the scorecard. It only appears when the round actually has bets on it. (*This is the tab that used to be called Board. Same place, new name, and the whole screen was rebuilt — see [Bets Screen](#).*)
- **More** — opens a sheet listing, alphabetically: **Admin** (admins only) · **Info** · **Stats** · **Times** · **Tourney**.

Where tournaments live. Multi-day tournaments are on the **Tourney** tab (More → Tourney). Regular and scheduled rounds are on **Rounds**. The two headers say so out loud:

Rounds: "Open rounds, scheduled rounds, your saved round history and round templates. Running a tournament? That lives on the **Tourney** tab."

Tourney: "Multi-day tournaments for 6 or more players. Regular and scheduled rounds live on the **Rounds** tab."

The Wager tab is turned off. Friendly side wagering has been switched off app-wide. The tab is gone from the More sheet, from live-round rows on Home, and from the Get Started tour. Anything that used to route there now shows the toast "**Wagering is turned off right now.**" It's disabled, not deleted — tell players it's turned off, not removed forever.

Back always goes back one step now. The Bets screen can be reached about fifteen different ways — the tab strip, the bottom bar, the floating "**View board**" bar on an active round, the GPS money bubbles, the end-of-round flow, a Crew row. **Back returns you to whichever tab you opened it from**, and from a GPS money bubble it puts you back on the **same hole of the map**. It used to be hardcoded to the Score tab, so opening Bets from Home and pressing Back dumped you on a scoring screen — sometimes a disabled one.

Escape / back: on web, **Escape** closes any overlay. On Android, the hardware **back** button works inside the app instead of minimizing it and throwing away what you were typing.

Update available banner. When a newer build is out, a banner appears above the bottom nav reading "**Update available — you're on — is out**" with an **Update** button (App Store on iPhone, Google Play on Android, page reload on web) and a ✕ that snoozes that one version. The app asks the App Store what version is actually live, so it can't tell you to update to a build the store doesn't have yet.

The app got materially faster to open. The web app had been downloading its whole 5 MB bundle **twice** on every launch, because the version check read the wrong slice of the file and fell through to a full uncached re-fetch. Launch traffic dropped by about **half**. Opening the course picker and typing in it are noticeably quicker too.

Bad Golf Pro (the gold PRO badge)

You'll see a small gold **PRO** pill next to a lot of games and features. Here's exactly what it means today:

Nothing is locked. Every game with a PRO badge is fully selectable and fully playable right now, for everyone. The badge is **informational** — it marks the features that will belong to **Bad Golf Pro** when paid plans launch later. There are no in-app purchases and nothing is billable.

Tap any **PRO pill** and a short explainer opens:

Pro features — free right now Features with this badge will be part of **Bad Golf Pro** down the road. Nothing is locked today — and as an early member, you'll keep **90 days of Pro free** after plans launch.

Dismiss it with **"Got it"** (or tap the backdrop). On a junk-bet row, tapping the badge opens the explainer **without** switching that bet on. The badge renders as the gold pill everywhere now, including inside the Info tab's game popups (it used to print the letters "PRO" as plain text in those headings).

What's free forever

Four games are permanently free (five tiles, counting the tournament version of Skins):

- **Skins**
- **Nassau** (with Huckle)
- **Match Play**
- **Stroke Play Pot**
- **Tournament Skins** (the event-wide Skins pot) — because it *is* Skins

Free features outside the game list:

- The **whole round experience** — scorecard, putts/GIR/fairway/penalty/sand tracking, live leaderboard, the Bets screen, settlements
- **Basic GPS** — satellite map, Front/Mid/Back yardages, target drag
- **One-tap settle-up** — Venmo, Cash App, PayPal (never badged, free forever)
- Your **WHS handicap index**, rounds history, and **Add past round**
- The whole **social layer** — Crew, friends, invites, the crew message board, Live Now, spectating, and highlights
- The **Times** tee-time calendar
- **Hydration / drinking games** (they're not bets)
- The **Info tab** help topics — handicap rules, "How handicaps work", "Good to know"

What carries a PRO badge

- **Every other betting game** — Vegas, Dynamic Vegas, Wolf/Captain, Banker, 6's, Splix 6's, Niners, Stableford, Bingo Bango Bongo, Quota, Team Quota, Ryder Cup, Scramble, Team Match, Team Low Ball, High & Low, Hammer, Umbrella, Pot of Gold, and the three round pools (**Low Net Pool**, **GIR Pool**, **Fewest Putts Pool**)
- **Every side bet** — Par 3 Greenie, Closest to the Pin, Long Putt, Long Drive, Birdie Bump, Animals, Marks, Hot Potato
- **All eight junk bets** — GIR, Sandy, Rolo, Barkie, Polie, Arnie, Chip-In, Snake
- **The tournament Event Pots** — Low Net, Most GIRs, Fewest Putts, Long Putt, the **Scramble Pot**, and the Tourney-tab **Side Pots** row
- **The GPS intelligence layer** — Plays-Like, wind & temperature, the club suggester, and **My Clubs** (badged at their settings screens; no pills are ever drawn on the live GPS heads-up display)
- **The Apple Watch app**
- **Shot tracking** — drive auto-estimate and the **My Shots** log
- **Advanced stat drill-downs** (the basic tiles stay free)
- **Events / multi-day tournaments** (the "+ New event" button)
- **Round templates**
- **Smack-talk voice packs**

NOTE

Admin note: Admin → Users carries a per-account Pro toggle (**Pro: ON** / ☆ **Pro: off**). It records who granted it and when. It changes nothing today — it's the plumbing ahead of a future paywall.

Home Tab

The Home tab is your dashboard — your handicap, your home course, your crew's chatter, and every round you're in.

Top to bottom: handicap & stat tiles → **Home course** card → **Crew card** (message board + highlights) → **"Your rounds"** → **Find a Course** → **Account card**.

Home **paints your saved rounds immediately** from what's already on the phone, then fills in invites, tournament groups and trophies as the network answers arrive. It also redraws the moment fresher data lands, so your photo, handicap and stats are never stale on a cold open. A card that genuinely fails to load says so instead of sitting on "Loading..." forever.

Handicap Box (KPI)

Location: top of Home tab, labeled "Hey [name]"

What it shows:

- **Handicap index** (to one decimal place)
- WHS-style: calculated from your best differentials in the last 20 rounds
- **Provisional** label appears if you have fewer than 5 rounds
- A **TEMP** badge instead, if all you have is the handicap you typed at sign-up
- **Last round score** (gross) if available
- **Tap the box** to open the Stats tab for full handicap details and round history

Stat tiles: the small tiles under the greeting (Rounds, Avg score, and friends) all tap through to the round-by-round stat detail popup. A player with no rounds yet sees **N/A** in every tile rather than the box vanishing or reshaping — the putts / GIR / fairway row is always drawn (tiles stay non-clickable until there's data).

Your Home Course

Tell the app where you normally play and two things happen: your rounds get a badge, and new rounds default to your course.

Setting it — two routes:

- **Home tab** → **the home-course card**. Unset, it reads **"Set your home course"** with a **"Choose my home course"** button. **One tap opens the course picker** — titled **"Pick your home course"** — and that's it.
- **Edit profile** → **Home course**, with **Choose / Change** and **Clear** (Clear asks first).

Once set, the card collapses to a compact **"HOME COURSE / "** row with a **"Change"** button. A one-time, dismissible prompt appears the first time; it's never blocking, and once you've seen it, it shrinks to a single quiet line. The card stays blank until your account has actually been checked, so it won't pitch at you when you already set a home course on another device.

The home / away badge. Every round you play is stamped **home** or **away** on the saved rounds list, the Home rounds card, the Stats round card, the round summary subtitle and the round Bets sheet header.

- "Home" means the **whole facility** — nine combinations, a nine played twice, and every course at a multi-course club all reduce to the same base course, so every routing at your club reads **home**
- **If you haven't set a home course, no badge is drawn anywhere.** That's by design
- The badge is deliberately kept off the scorecard grid itself and out of share text and images

New rounds default to it. With a home course set, round setup pre-picks it and says so: *"Defaulted to your home course — X. Search above to play somewhere else."*

- A **three-nine, reversible or multi-course** home club is deliberately **not** auto-applied — it would pop the "which nine?" picker every single round. Those get a one-tap chip above the search instead: **"Play my home course — "**
- Order of precedence: a tournament or live-round prefill beats a restored setup draft, which beats your home course, which beats an empty picker

NOTE

Guests can set a home course too — it saves on that phone. Signing in is only what syncs it across devices.

Account Card

Edit profile · Sign out · Delete account. This is the reliable way into the profile editor — a brand-new user with no rounds used to have no route to change their own name.

Crew Card — Message Board & Highlights

A single card near the top of Home holds your crew's social feed.

Crew message board · friends only

- Post a message straight from the box in the card; posts and replies from your friends appear below it
- The header literally reads **"Crew message board · friends only"** — it is **not** a public wall
- **Messages arrive in real time.** The old ↻ refresh button on the board is gone because it did nothing
- The board shows **3** top-level messages before collapsing, and replies collapse at 3 per thread with a **"Show N more replies"** toggle
- **Edit** and **Delete** appear on messages and replies you posted — editing happens inline with Save/Cancel (Enter saves) and leaves an **(edited)** tag. Admins can edit or delete anything
- Threads auto-delete **30 days after their last activity**, so an active conversation survives. Deleting a message that has replies removes the whole thread, after a confirmation naming the reply count
- **A comment or a fist-bump that doesn't reach the server now says so.** Both used to report success and then quietly disappear — and a failed fist-bump used to add a *second* bump instead of toggling the first one off

Crew highlights (below the board)

- Aces, eagles, birdies, and hero moments from the last 24 hours
- Shows **player name**, **hole**, **course**, and **photo** (if available)
- **Fist-bump** — tap the highlight for a quick reaction
- **Comment** — tap the comment icon and type up to 280 characters
- Previews **7** items, with "**Show more (N)**" / "**Show fewer**" to expand up to 40

Everything on Home is friends-only. The old Friends only / Everyone scope dropdown was removed — crew highlights and the message board are permanently limited to you and your accepted friends.

Watching Friends Play — "Live now" (Crew Tab)

Live now moved off Home. The card that used to list in-progress rounds on the Home tab was removed to slim the screen down. **The Crew tab still has its own "Live now" list, with Spectate and Wager buttons on each row** — that's where you go to watch a friend play.

- Rounds currently in progress by you and your accepted friends, refreshing in real time
- **Player names**, **course**, and **status** (holes scored so far)
- Tap a row to **spectate** — watch their GPS live and see scores update
- Live rows carry a **red** border and tint so an in-progress round can't be confused with a finished one
- A round you deleted disappears immediately, and a finished round can no longer masquerade as LIVE
- A past event with a group that launched but never finished no longer shows a pulsing **"live"** pill

Crew round-start alerts: when a friend starts a round with **"Alert friends"** on, you get an **in-app pop-up** and a **push notification** ("*Name* started a round at *Course*, *City*").

"Your rounds" Card

One list for everything you're in — live invites, scheduled rounds, open rounds you joined, tournament group rounds, and your full completed-round history.

Row layout: title and subtitle on the left, a status chip, and one small action button on the right.

- **Status chips:** **"LIVE"** (red), **"SCHEDULED"**, **"✓ COMPLETE"**, **"PAST"**
- **Action button:** **"View"**, **"Resume"**, or **"Join now"** — and **Join now on your own live round works**, taking you straight to the scorecard and opening GPS
- **"View" on a completed round opens the Bets sheet directly.** The separate icon button that used to sit beside View is gone from Home, Rounds and Crew — one button does the job. (*A manually logged round has no game record, so View on those still opens Stats.*)
- **home / away** marker before the course name
- **trophy** next to the course name if the round was part of a **tournament**
- **partner scores** on completed rounds — a second line reading e.g. **Mike 79 · Kevin 82 · Paul 88**, best score first, capped at 5 names with **" +N more"**

- Extra actions sit in a compact wrapped row underneath: **"Edit details"** / **"Edit settings"** on scheduled rounds, **"Scorecard"** / **"GPS preview"** on tournament rounds, **"Leave round"** on a round you didn't create

Loading: only the 10 newest completed rounds draw at first. **"Show all N rounds"** builds the rest; **"Show fewer"** drops back to 10.

The Bets Sheet

Tap **View** on any completed round (on Home, **Rounds**, **Crew** or the Tourney tab) to open a full money breakdown for that round. No data loads until you open it.

What's inside, top to bottom:

- A header line — **course · date · group**, with the home / away badge
- **Group bets** — every money game with each player's green (up) or red (down) amount. Games where everyone is at \$0 are hidden; a round with no money games says so and shows **"All square"**
- **Settle up — this group** — the exact who-pays-who lines
- **The full scorecard** — with birdie/eagle circles, strokes-given dots, skin circles, and **gross and net on every nine**. **Blue** = your group's own skins; **gold** = a tournament-wide field skin; a hole that wins both gets a combined blue+gold ring
- (tournament rounds only — the whole block is left out on a casual round) — Team Quota standings, **Settle up — whole event**, **Tourney bets — who won what**, **Other groups' bets — who won what** (one row per pot, each tagged **— Group N**, your own group left out), the whole-field scorecard, and **Tournament Results**
- **Every bet — who won what** and **Text settle-up**
- **Reopen round** on a finished round

Why the event block matters. The sheet's settle-up used to be group-only. On an event where all the money sat in event pots, it could cheerfully say *"All square — nobody owes anybody."* while real money was owed across the field. Now the group block is labelled **Settle up — this group** and the event block sits right under it, so the two read as group-then-event. While other groups are still playing, the whole-event settle-up carries a **"Provisional — N of M groups finished"** note.

Find a Course

- The **Find a Course** card sits near the bottom of Home, directly above the Account card
- **Can't find your course?** Tap the request button, type the name and city, and send it — admins add it (usually within 24h). The request sheet lifts above the on-screen keyboard, scrolls, and won't throw away a half-typed request if you tap the background

NOTE

The *"Live Holes Across America"* live-camera section has been removed from Home.

Share Feedback

A " **Share feedback**" button on Home opens a form for course problems, bugs and ideas. You can attach screenshots (**Add screenshots**) and tap **Send feedback**; it lands in the admin Feedback inbox.

The form behaves itself: it shrinks and scrolls so **Send** is always reachable above the keyboard, a backdrop tap **keeps your draft** (with a toast saying so), **Cancel** asks before discarding, and only a successful send clears it.

Beta Invite

The Home **Beta Invite**, round/game invites and tournament invites all carry both store links, because the sender can't know what phone the recipient has:

Get the free app first (best experience): iPhone: / Android:

Play / Setup Tab

The Play / Setup tab is where you create and configure a new round.

Starting a Round

"New round" button (top of Play tab) launches the setup flow.

Step 1: Choose a course

- **"Search by course name or state..."** input field
- Browse nearby courses (auto-populated by your location) or type to search — search is fast and results can't land out of order
- Results are **sorted alphabetically within each state**, so every multi-course club pairs up automatically (Winged Foot East/West, Oak Hill East/West, and so on)
- **If you've set a home course, it's already picked** — "Defaulted to your home course — X. Search above to play somewhere else." A three-nine or multi-course home club offers a one-tap chip instead: **"Play my home course — "**
- Tap a course card to select it
- **"View details"** shows par, rating/slope, GPS coverage status

Course status indicators:

- **complete** — full par + rating + GPS mapped
- **mapped (needs targets)** — GPS tees & greens mapped, needs fairway centers
- **partial** — some holes mapped, needs more GPS data
- **no GPS** — in the library but no GPS yet
- **possible duplicate** — admin flagged

Multi-course and multi-nine facilities. A club with several full 18s shows as **one search result with a picker** — searching "Bethpage" returns **Bethpage State Park** and tapping it offers **Black / Red / Blue / Green / Yellow**, each playing as its own full 18 with its own rating, card and stats. A 27- or 36-hole club offers its real **combinations** (e.g. Woodlands Palmer: King/General, General/Deacon, Deacon/King), each officially rated, rather than one generic 18.

Can't find your course? Tap **"Can't find a course?"**, enter the course name and city, and tap **"Send request"** — admins will add it (usually within 24h).

Step 2: Select your tees

- Each course may have multiple tee boxes (Championship, Blue, White, Red, etc.)

- **The picker shows the numbers.** The course card lists each tee with a colour dot plus rating/slope and yardage instead of just a colour name, and every dropdown option reads like **Blue · 6,808 yds**. Women-only tees show **(W)**; missing values show **—** (about 96% of tees have rating and slope, 89% have yardage)
- **Course Handicap** auto-fills based on your Handicap Index × the tee's slope/rating formula
- You can override the handicap if playing a different set
- **On a course with per-tee par data, your tee's own par and stroke index are what you're scored against** — see [Per-Tee Par](#)
- **"Edit tees"** button (admin only) — add/update tee ratings and slopes

Step 3: Add players

- **"Select a Player"** — one full-width button opens the roster picker
- The picker pins your **5 most recently used players at the top** and sorts everyone else strictly **A–Z**. There's a **Done** button at the top of the picker as well as the bottom, so you don't have to scroll a long roster
- A newly picked player's row **stays expanded** so you can set their handicap right away
- A **"TEMP"** pill appears beside any handicap that isn't a real established index
- Manually enter a new player with first name, last name, and optional handicap (32-character limit on names)
- Tap **"Invite — share join link"** to send an invite to that player
- Reorder players by dragging the **⋮** handle
- **Remove player** — tap the **×** button on their row (see the confirmation rule below)

A round can have up to 8 players (it used to cap at 5). Two things to know:

- **High & Low needs an even number**, so it blocks at 7 (6 and 8 are fine)
- **Vegas, Dynamic Vegas, 6's, Ryder Cup, 2-man Scramble and Umbrella still require exactly 4**

Team games balance themselves as you add players. Every team-game picker — Vegas (fixed or switch-at-the-turn), Team Match, Team Low Ball, Team Quota, Ryder Cup, Scramble, High & Low, Umbrella — puts each new player on **whichever side is currently smaller**. A normal foursome now reads **"Balanced 2v2"** straight away. It used to assign by row position, so adding players one at a time produced **"Unbalanced: 1 vs 3 — tap a player to swap teams"** and blocked the round until you fixed it by hand. Any team you set yourself is never overwritten. The team chips are also full-size tap targets now (44px) instead of the old 29px sliver.

Removing a player is an explicit, confirmed action. A player is only dropped if you tap **×** on their row and confirm a dialog that names them and spells out the cost:

Their scorecard — 14 holes already scored — will be deleted, along with their putts, GIRs, fairways, sand saves and any bet they are in. This cannot be undone.

Previously, simply saving settings on a 6+ player round could silently delete a player and their scores. Removing someone and re-adding them in the same session is a true no-op.

Step 4: Choose format & betting games

NOTE

See [Betting Games](#) for complete rules and options.

Main games (choose one or more — exact in-app labels):

- **Skins** (free) — low score wins the hole; ties carry or split; its own handicap allowance slider
- **Nassau (with Huckle)** (free) — front 9 / back 9 / overall; 2–5 players per Nassau; Huckle press
- **Stroke play pot** (free) — lowest total takes the pot
- **Match play (1v1)** (free) — head-to-head by holes won (add multiple matches)
- **Banker** — rotating or per-hole-picked banker plays everyone 1-on-1 each hole
- **Vegas (4 players, 2v2)** — paired-digit scoring, birdie flips, capped tie escalation
- **Dynamic Vegas (4 players)** — Vegas with partnerships shifting each hole
- **6's / Round Robin (4 players)** — best-ball, partnerships rotate by segment
- **Splix 6's / Split Sixes (3 players)** — 6 pts/hole (4-2-0), buy-in or per-point
- **Niners (5-3-1)** — 3 players, 9 points a hole, optional **Blitz**
- **Stableford** — points-based (Dbl Eagle 5, Eagle 4, Birdie 3, Par 2, Bogey 1)
- **Bingo Bango Bongo** — 3 pts/hole (first on green, closest, first out)
- **Captain (Wolf)** — Wolf rotates; pick partner, Lone Wolf (2x), or Blind Lone Wolf (3x)
- **Hammer** — match play with a doubling cube; Team (2v2) or Individual
- **High & Low (2v2)** — a point for the better low ball, a point for the better high ball
- **Team match play** — any even teams, best-ball per hole
- **Team low ball** — even teams, sum of best-ball over 18
- **Quota (Points)** — Albatross 8/Eagle 6/Birdie 4/Par 2/Bogey 1 vs. your quota
- **Team Quota** — even teams, sum of (points – quota); buy-in pot
- **Ryder Cup (2v2, 3 segments)** — Best Ball / Scramble / Alternate Shot (your order)
- **Scramble (2v2)** — both hit, pick best, repeat
- **Umbrella (4 players, 2v2)** — 5 points a hole, each worth the hole number
- **Pot of Gold** — a cash pot on every hole, weighted by difficulty
- **Closest to the Pin** — per-hole payouts, or pool mode for one pot
- **Animals** — penalty animals pass around; only the last holder pays
- **Marks** — most highlight-reel plays wins, not lowest score
- **Hot Potato** — one token that doubles every time it changes hands (capped)
- **Low Net Pool** — everyone antes, lowest net over 18 takes the pot; its own handicap allowance slider
- **GIR Pool** — everyone antes, most greens in regulation takes the pot

- **Fewest Putts Pool** — everyone antes, fewest total putts takes the pot

△ **Eleven of these are unavailable inside a tournament. Banker, Dynamic Vegas, Splix 6's, Bingo Bango Bongo, Wolf, Hammer, Umbrella, Pot of Gold, Animals, Marks and Hot Potato** can't be set as a tournament day game or as a foursome's own group bet inside an event. (Animals, Marks and Hot Potato used to leak through into group bets because their tiles sit in the Side Bets section, so a group could switch on a game the director could never offer.)

Normal rounds are unaffected — all eleven still work there. Junk, Snake, Greenie, Long Putt and Birdie Bump are untouched.

Side bets (enable/disable independently):

- **Par 3 Greenie (with Hero Tax)** — closest to pin on par 3s; optional "3-putts still win" mode
- **Long Putt** — everyone antes; longest putt of the round takes the pot
- **Long Drive** — everyone antes; longest drive on the designated hole takes the pot
- **Birdie Bump** — payouts for birdie / eagle / hole-in-one
- **Junk** — ● GIR, Sandy, Rolo, Barkie, Polie, Snake, Arnie, Chip-In (per-bet toggle & amount)

Player pickers. Most games let you choose exactly who's in, with a chip per player plus **"Select all"** / **"Clear all"** (minimum 2) — Nassau has one too. The three pools, **Long Putt**, and **Long Drive** pre-select everyone the first time you switch them on. **Players added mid-round appear in every game's picker**, and the pools auto-include them unless you explicitly take them out.

Bet amounts are capped at **\$10,000** per field and open a numeric keypad. Fractional steps (Dynamic Vegas at \$0.05) and \$0 friendly bets still work.

Hydration bets (sip trackers — no money): In the drink, Bunker, OB/lost ball, Whiff, Worm burner, Chunk & skull, Three-putt, Loser drinks, Par or drink, Honors pours, Snake, Wolf, Tee box toast, The Turn, 19th hole tally — plus a "Sips-of-water mode" to keep it dry.

Step 5: Configure scoring rules

Handicap application: Gross · Net · Gross & Net.

Round Tracking — a settings-style list with a switch on each row:

Toggle	What it adds
Putts	A counter under each score. With GIRs also on, GIR computes automatically (score – putts ≤ par – 2).
GIRs	Greens in regulation. With putts off, tap the GIR chip on each score row. Fills the GIR junk bet automatically.
Fairways	A hit/miss tap on par 4s and 5s (par 3s have no fairway).
Penalties	A +pen tap beside the fairway chip. Auto-fills the Rolo side bet.
Sand saves	A sand tap on every hole. Par or better from the sand auto-fills Sandy .

Game visibility (who sees what): **Everyone** · **Friends only** · **Just me**. (When two accounts share a name, the app keeps the more restrictive of the two settings, so a "just me" player can never be exposed by a same-named stranger's choice. A change that doesn't reach the server now says so rather than confirming a privacy setting that never saved.)

Other settings: **Drive distance estimate** · **Round pop-ups** · **Alert friends**.

Step 6: Schedule or start

- **"▶ Start round now"** — begins play immediately. Double-tapping can no longer create two rounds on the same code
- **"Save for later"** — saves the setup; all settings stay editable until you start

Your Setup Is Saved While You Poke Around

Backing out of round setup doesn't wipe what you picked.

- Reopen a fresh setup **within 30 minutes** and the course, players, bets and options come back — with the toast **"←Picked up your round setup."**
- Drafts older than 30 minutes are thrown away so you always start clean.
- The draft is cleared the moment you actually **create** something — starting a round, saving a scheduled round, or saving a template.
- **Your game selections are deliberately not part of the draft.** A brand-new round always starts with nothing ticked, even if you played Skins + Nassau + Junk yesterday. The per-game values are remembered, so ticking Skins again recalls your stake.

Invite players (any time during setup or scoring)

- **"Invite players — share the join link"** creates a shareable URL
- Already-added players show their status (Joined / Not yet joined)

- Invites of every type **expire after 14 days**, and finishing or deleting a round retires its invites for everyone at once — no more Join buttons that lead nowhere

Templates

- Save any round setup as a reusable template: in the schedule flow tick **"Save as reusable template"**
- Templates keep your format, games, and default course; **"Use"** spins up a fresh copy
- **Round templates are private to you.** They used to be a shared list where everyone saw everyone else's; they're now filtered to their creator, and deleting one can't remove someone else's. (Very old untagged templates whose owner can't be determined stay visible to all.)

Tournament templates have been removed. The Tourney tab's template card, **"Save as template"** and **"Use template"** are gone. **Round templates, described above, are a different feature and are untouched.**

Score Tab

The Score tab is live during a round — enter scores hole-by-hole and track side bets.

Scorecard Entry

Layout:

- **Hole number** (1–18) with par in parentheses, e.g. "Hole 1 (Par 4)"
- **Player rows** — one per player with score entry field
- **Handicap strokes** shown as small dots under player name (if net game)
- Tap the score field to open the **score entry stepper** (± 1 buttons or type directly)

Scoring rules:

- Scores range 0–15
- **GIR chip** — if GIR tracking is on and putts off, tap to toggle. On an unplayed hole it reads "**GIR —**"
- **Fairway chip** — HIT/MISS for par 4s and 5s
- **+pen tap** — beside the fairway chip when penalties tracking is on
- **tap** — sand saves, available on every hole
- **Putts counter** — under the score (tap to edit)

Score-tab controls: **End early** · **Leave round** · **Delete round** · **Edit settings** · **Invite** · **Return home**. "**End early**" becomes "**Finish round**" once every hole is scored, and is a permanent Finish shortcut on tournament rounds. (Finish and the round's other close-out actions also appear on the Bets screen — the duplicate is deliberate.)

There is no "Abandon round" any more. It was added briefly and then removed from the whole app. A finished round opened read-only carries a "**Delete**" button instead — that removes the round **from your list only** and recalculates **your** handicap. It never appears on a live round, and it never deletes the round for anyone else.

Say the Scores (Voice Entry)

A "**Say the scores**" button sits at the top of the score entry. Tap it and a sheet opens:

Voice scores — Hole 7 Say a name, the score, then putts. Like: "Kevin 5 with 2 putts". Players: Kevin, Tyler, Mike...

- The box shows **"Listening... or type here"** and a live **"Heard:"** preview, so you can see what it caught before committing
- If your device has no speech recognition, the placeholder reads **"Tap the mic on your keyboard, then talk"** — the keyboard's own dictation works fine
- Buttons: **Cancel** and **Add scores**
- Nothing is written until you tap **Add scores**
- The button is hidden in view-only mode, on a finished round, and on a scramble (team scores only)

Two Phones Scoring the Same Round

Scoring from more than one phone is safe. Before saving, the app re-reads the shared card, queues the save rather than blindly overwriting when it can't read, and re-sends any of your own entries that got wiped on another device (within about 15 seconds). Solo rounds behave exactly as before, and tapping Finish still saves immediately.

Scores you type with no signal **survive an app restart** — the record of which cells you edited is written to the phone, not just held in memory. **Opening a round can no longer overwrite your phone's scores with a staler cloud copy**: if the local card has more scores, it wins and gets pushed up.

The amber "waiting to sync" bar. If a round has been waiting to reach the cloud for more than **90 seconds**, a persistent amber bar appears at the top of the Score and Bets panels — it says how long it's been waiting, confirms the scores are safe on your phone, and offers **Retry now**. It clears itself the moment the sync lands. Before this, the only signal was a six-pixel dot turning amber, which nobody could see on a phone in sunlight.

Opening a tournament round with no signal now warns you rather than silently making you the scorekeeper — two phones could both end up thinking they held the card. You can still score; you're just told.

Per-Tee Par and Stroke Index

Ladies' and senior tees are now scored against their own par. On a course where the tees genuinely publish different pars, each player is scored against the par printed on **their** tee — and against that tee's own stroke index where the club publishes a separate women's index.

- The hole header shows **4 / 5** when the tees on the card disagree about that hole
- There's nothing to switch on. It activates automatically on courses that carry per-tee data, and a course without it behaves exactly as before
- It flows all the way through: net scoring, course handicap, Stableford, Quota, Skins (both the par-or-better gate and the natural-birdie trump), Banker, Vegas, Birdie Bump, Animals, Marks, High & Low, Umbrella, Pot of Gold, Hammer and GIR

Three rules worth knowing:

- **A scramble is scored against the card par** — one ball, one team score
- **Best ball uses the par of the player whose ball counted**
- **Closest to the Pin, Greenies and the Long Drive par-3 gate are deliberately NOT per-player.** They're one shared contest, so the card's par-3 list is what counts

NOTE

Per-tee data exists on a few hundred courses so far and is added by admins through the course importer — there's no in-app per-tee editor.

Pars & Stroke Index

- **Par column** — fixed for each hole (set during admin course setup)
- **Stroke Index (SI) row** — 1–18 handicap strokes, shown at the bottom of the scorecard

Handicap strokes on a nine. A 9-hole round allocates strokes over the holes you're actually playing. A 12-handicap on a nine gets **12 strokes** (2 on SI 1–3, 1 on SI 4–9) — it used to give 9. 18-hole rounds are unchanged.

Gross and Net on Every Nine

Every scorecard in the app — the round scorecard, the one on the Bets screen, the GPS mini card, the score edit grid, the tournament field card, the event scorecard and the shared images — shows **Out / In / Tot** with the gross score large and the net score small beneath it, under a small **net** sublabel in the header.

- Net is allocated **by stroke index on each nine**, not by halving your handicap, so front net + back net always equals the round net
- The tournament/event scorecard previously had **no Out/In split at all** — it has Out, In and Tot now
- **Net is left off entirely when it equals gross** — a scratch player, a "plays gross" player, or a no-handicap round renders exactly as it always did, and the **net** sublabel only appears when somebody on that card is getting a stroke
- **Scramble and Ryder Cup team rows keep the plain header** — a team row has no single handicap
- On a genuine 9-hole round the "In" column is empty by construction

GIR / Fairways / Putts / Penalties / Sand Saves

Set these five toggles under **Round Tracking** during setup. On the scorecard:

- **Putts** — tap the number under each score to edit
- **GIRs** — tap the chip on each hole if putts is off

- **Fairways** — tap **HIT** or **MISS** on par 4s/5s
- **Penalties** — tap **+pen** each time a player takes a penalty stroke
- **Sand saves** — tap **sand** when a player was in a bunker

All of it syncs to your Stats tab and lifetime statistics.

Junk Bets That Fill Themselves

Four junk bets mark themselves off data you're already entering. **A hand-tapped chip always sticks** — a manual add or remove is never overwritten by a later resync.

Bet	Auto-fills when	Needs
• GIR	The tracked GIR is hit	GIR tracking on
Sandy	A hole marked "in the sand" is scored par or better	Sand-save tracking on
Rolo	A penalty stroke and a par-or-better score are both in	Penalties tracking on
Chip-In	Putts for the hole are exactly 0 and the score is par or better	Putts tracking on

Notes worth knowing:

- **Chip-In excludes a score of 1** — a hole-in-one is an ace, not a chip-in.
- **Arnie** requires knowing you missed the green, which only exists when putts are tracked. **If a round tracks Fairways and GIRs but not Putts, Arnie will never award** — turn Putts on if you're playing Arnie.
- Each of these only appears if the round was set up with that bet ticked.

Side Bet Entry

Per-hole rows below player scores:

Par 3 Greenie (on par 3s only, if enabled):

- Tap chips for each player to mark the closest to pin
- If **Hero Tax** is on and a winner is marked, a sub-row asks "Did the greenie winner 3-putt?" — tap to mark, and the greenie chip crosses out (forfeit) with the Hero Tax penalty applied
- If the **"3-putts still win"** option is on, none of that appears — the greenie pays regardless and the header says so

Closest to the Pin: tap the winner's name, punch in **feet + inches**. A CTP winner logged with no distance still wins the hole — a player from another group who does log a measured distance beats them.

Long Putt / Long Drive: tap who holds the longest putt and log the distance — update it any time someone drains a longer one. Long Drive is marked by the organizer on the designated hole (there's no auto-measure).

Junk: a row of toggles for GIR, Sandy, Rolo, Barkie, Polie, Snake, Arnie, Chip-In. Tap player names to toggle; multiple players can score the same junk.

Hammer: Team (2v2) mode shows the two side-fold buttons; Individual mode shows one "{Name} declined" toggle per player.

Banker: the banker row for the hole. Every player's bet box is prefilled from your **Default bet per player**; the banker enters min/max range and players pick their bet. In **Pick each hole** mode the banker picker appears from hole 1 (tap a player to "Take bank", listed worst-to-best, with a **Change pick** button) and the banner header reads **"Pick the banker."**

Match play: shows current match status (e.g. "You are 2 up").

Animals / Marks / Hot Potato / Bingo Bango Bongo: each has its own per-hole tap row.

Birdie Bump: automatic from the scorecard — no manual entry.

In a tournament: your foursome's **own group bets** show their per-hole entry rows too — Par 3 Greenie, Junk, CTP, Long Putt, Long Drive and Birdie Bump.

⚠️**Re-saving a live round's bets can wipe per-hole data.** Editing and re-saving the games on a round in progress has been seen to erase already-logged Greenie winners (and the same risk applies to junk, CTP and long putt). If you edit a live round's bets, re-check your per-hole winners afterwards.

Celebrations During a Round

Birdie and eagle pop-ups now identify you by **account**, not by matching your name — so you no longer see every player in the field's celebration on your own phone. In a tournament, an identity the app can't resolve shows **nothing** rather than showing everything; a plain single-phone round still shows all of them.

In a live tournament round, **birdies, eagles, long putt, long drive and lead changes surface as toasts** on screen. They used to be posted only into tournament chat with nothing listening, so you'd only see them if the chat panel happened to be open. Only events that arrive **after** you open the round are shown, each once, and never your own.

Editing Scores

- Tap any score to open the stepper and adjust
- Putts, GIR, fairways, penalties, and sand saves update live

- Settlements update if money games are active
- **Pop-ups open in front of the GPS map.** 37 of the app's 41 modals used to open behind the live-round map, which is why tapping a button mid-round looked like nothing happened

Finishing — and Reopening — a Round

- Tap **"Save & return home"** on the round recap to finish. (That's the only button on the recap now — the old "Back to board" is gone.) Saving is bounded at ~6 seconds, then the modal closes and you land Home while the bookkeeping finishes in the background — it can't hang on course wifi. If a save genuinely fails, the app tells you instead of sending you home believing it worked
- **You always land on Home.** Finishing a round that had been reopened used to strand you on a disabled Score tab, and finishing from the GPS view left the full-screen map covering the app
- The button can't be double-tapped into a duplicate archive or a doubled "completed a round" push
- **Everyone else sees the payout too.** When the scorer finishes, every other phone opens the same payout summary rather than just getting a toast and being dropped home
- **"Share results"** on the recap sends **both** images — the scorecard **and** the every-bet card. It used to send only the scorecard

Reopening. A finished round opens read-only with **"Round complete... Read-only view — tap Reopen to make edits"** and a gold **"Reopen round"** button (also on the Bets sheet).

- Tap **Reopen round**, fix the score or log the missed greenie, then tap **Finish round** again — **every payout recalculates automatically, and the corrected card is what reaches your stats and handicap.** (The archive is written first, while the round is still fully loaded, so a bad connection can't leave the old scores behind.)
- Only one person should edit at a time. Everyone else should back out and back in to see the corrected numbers

Three banner states, and they now say the right thing:

Banner	Means
Round complete	finished, read-only
↔ Reopened for edits	reopened; only the scorer can change scores
Spectating	somebody else's round, read-only

Tapping a score as a viewer gives the matching toast — **"Round is finished — reopen to edit"**, **"Reopened for edits — only the scorer can change scores"**, or **"Spectating — read-only. If this is YOUR round, open it from the Rounds tab."** A round you reopened days later used to say **"Spectating"** on every surface, which read as though it were someone else's. Opening a reopened round from the spectate path now takes you to the money screen rather than the live map — nobody's out there walking it.

Bets Screen (Money & Settle-Up)

This is the tab that used to be called Board. Same place in the bottom bar, now labelled **Bets**, and the whole screen was rebuilt: it no longer draws its own hand-made money list, it renders the same layout as the round Bets sheet. One money surface, one set of numbers, everywhere in the app.

It still appears only when the round actually has bets on it, and every old way in still works — the tab button, **View leaderboard** on the Score tab, the GPS money bubbles, the Event Leaderboard payout buttons, and the spectator landing.

What's On It, Top to Bottom

1. A **view-only / spectating banner**, if you're not the scorer
2. A one-line round header — **course · date · group** (e.g. "Team Quota Test · Buffalo Creek Golf Club · 8/19/2026 · Group 2")
3. **Scope chips** — **Tournament total / Group total** (tournament rounds only; a casual round shows no chips)
4. **Settle up — who pays who**, with **Every bet — who won what** and **Text settle-up**
5. **Event pots** (tournament rounds under Tournament total only)
6. **Money standings**
7. **Per-game breakdown** (its own card)
8. **Scorecard**
9. **Game results** — the per-hole detail (**H16: Marcus Reed +\$15.00** , carries, "**Show all 18 holes**")
10. **Actions** — Back · Home · Finish round · Invite friends · Edit round settings · Edit scorecard

Settle-up is deliberately first. The invite and edit buttons used to sit above the money; they're below **Game results** now.

The Two Scopes

- **Tournament total** (default) — everything combined: every group's bets plus every event-wide pot
- **Group total** — just your own group's bets

Your choice is remembered per round. **The chips now govern everything below them** — settle-up, the pot lists, the scorecard and the greenie card, not just the money rows. Under **Tournament total**, the **Putts & GIR** block and the **Scorecard** show **every player in the event**, once each.

Previously the standings table and the settle-up card underneath could show two different answers on one screen. They're built from the same numbers now, with a header line saying what the scope covers and a note when groups are still out.

On a multi-day event, **"Group total" now means the round you're actually looking at.** It used to re-derive "your group" as day one's round, so a round you weren't in on day one reported **\$0 in group totals while Group bets showed \$40.**

"Running totals — not final"

While a round is unfinished, the **Settle up** heading carries a **"Running totals — not final"** stamp. It disappears the moment the round is finished. Money and settle-up are visible from hole 1 as always, and nothing appears or vanishes mid-round — this just fills the gap where a fully-scored-but-unfinished round gave you no signal that the numbers could still move.

Live Leaderboard

Columns (left-aligned, scrollable):

- **Player name** (with crew photo if available — rows fall back to the account profile photo when the roster entry has none)
- **Score vs. par** (± 0 notation)
- **Money** — green chip = up, red = down, gray = even
- A thin sub-row under each player shows live running tracking totals, e.g. `24 putts · <span class="dot" style="color:#1f8a3b">●</span> GIR 4/9`

Sorting: tap column headers to sort by name, score, or money. Default is money, highest win first.

Scorecard Circles

- **Blue circle** — your group's own skin
- **Gold circle** — a tournament-wide **field skin**
- **Blue + gold ring** — a hole that won both
- On the **Tournament Results** full scorecard only, birdies circle **blue** and eagles-or-better get a blue **double** circle

Bets & Money Chips

Per-game breakdown table:

- **Games that actually paid money sort to the front** of the horizontally-scrolling table; configured-but-empty pots move to the end. Nothing is dropped — "the table is missing games we played" was almost always games scrolled off to the right

- Each group side bet gets **its own named column** (Nassau, Birdie Bump, Stroke play...). The old catch-all **"Group bets"** column only appears if there's group money that can't be attributed to a named game — so if you see it, it means something
- **"Skins won"** shows your **net** (winnings minus buy-in) with the skin count in parentheses, e.g. **+\$13.33 (2)**
- **A pot that's configured but hasn't paid anyone yet shows as \$0.00** instead of disappearing
- **Pots that can't settle until everyone finishes say so.** Skins, Closest to the Pin, Long Putt and tournament Nassau show a **still live** sub-label under the header and **not settled** in the cells, instead of a bare — that looked identical to "nobody won it"
- **\$0 friendly bets still show who won** — a green **W**, red **L**, or **AS** in each player's cell

Junk bets: a collapsed section — tap to expand and see every greenie, sandie, Rolo, etc. with amount and winner.

Settled vs. unsettled: during the round, **provisional** money (marked in yellow); after the round, final settled amounts.

Every Bet — Who Won What

On the settle-up card, **"Every bet — who won what"** opens a read-only, document-style page listing every pot, every winner and every payment on one screen with no horizontal scrolling. A line underneath reads "This is exactly what goes out with the texted settle-up."

It respects the scope chip. Opened under **Tournament total** it shows the event pots plus every group's side bets. Opened under **Group total** it shows **this group only**, titled **<course> – Group N – this group's bets** with the subtitle "This group only · switch to Tournament total for the whole event." It used to always show the whole event no matter which chip was lit.

NOTE

The round Bets sheet opened from the Rounds list is deliberately pinned to the full view — it always shows group bets and then tournament bets.

"Share this as an image" hands the same page to your phone's share sheet as a PNG.

The images are zoomable. Tap the bets card or the scorecard image and it opens full-screen with explicit **–**, **+** and **Fit** buttons, a scrollable pane, double-tap to toggle and **Esc** to close. Two-finger pinch works where the platform allows it — but the app ships with page zoom disabled, so **the buttons are the zoom**.

Reading a Payout Screen: POT / WINNER / WINS

Every payout screen lists **one row per pot**:

Column	What it means
POT	the bet
WINNER	who took it
WINS	what the winner collects from that pot — not the pot size

Under each row is a grey **detail line** with the specifics — a CTP distance, the skin count, the winning net, the pot size. For Skins, WINS shows the per-skin value (e.g. **\$4.44**) with **9 skins · pot \$40** and the winning holes underneath.

Detail lines are written for all 35 games. Examples:

- **Nassau** — **front: ... · back: Tie – carries · overall: ...**
- **Banker / Wolf / Vegas / Hammer / BBB / Pot of Gold** — **Tyler 2 holes · Steve 1 hole**
- **Best Ball** — **Tyler & Steve 71 – 74 Kevin & Chris**
- **Hot Potato** — **ends with Chris · \$16 · doubled x3**
- **Junk** — **birdie x2, sandie x1**
- **Greenies** — **holes #4, #12**

NOTE

On the less common games the detail line is best-effort — if the app can't summarise a game confidently it prints nothing rather than risk a wrong line. The POT / WINNER / WINS row is always correct.

On mobile, each pot is now its own block — pot name and amount on the top line, winner full-width beneath. Five pots fit in roughly the space one used to take. Team standings rows are two stacked lines per team for the same reason: a paired team name like "Corey Whitfield & Ines Marchetti" used to break mid-word and render fourteen lines tall.

Detailed Settlements

After round completion, the round summary is a full-page mobile screen that scrolls as one — buttons included. There's a single **"Final payout"** board plus the per-game breakdown table.

- **All money games** count toward the group figure rolled into the total — Wolf, Vegas, Hammer, Stableford, Umbrella, Pot of Gold and the rest no longer drop out
- A **day game that settles inside each group** (Stroke is the common case) is recovered automatically, so it can't appear in the breakdown table but vanish from the pot tables and the shared image

Texting the Settle-Up — One Button

There is now **one** share button, with **one** label, in all three places it appears — the Bets screen's settle-up card, the round-complete summary, and the round Bets sheet:

Text settle-up

It always attaches the images — the scorecard image and the bets card — on every game type. (The Bets sheet's version used to send bare text with no images and, on a tournament, none of the event money.)

The message body is deliberately short: a title line, the **PROVISIONAL** banner when it applies, the **Settle up:** who-pays-who lines, and the **payment links**. The old **Standings:** list and per-game **Breakdown:** text were dropped from the message — that detail is on the attached image, and long texts were being split in ways that broke a URL in half.

Retired labels — if you see these in an old screenshot or an old support note, they no longer exist: **Text settle-up – with images**, **Text everyone – with images**, **Text this breakdown**, **Text the numbers – auto-fill my crew**, and **Brag to crew**. (System-generated brag posts to the crew feed are a separate feature and still happen.)

Other settle-up behaviour:

- **Payment links are tappable.** Each pay line starts at the left margin with the URL last, and carries **one** link — the payee's preferred method only
- **Every row shows its payment links.** The **Mark paid** checkbox was removed; a row flagged paid in an older build used to hide its Venmo and Cash App links, and rounds still carrying that old flag simply don't display it any more
- **Sending before everyone has finished warns you first** — the app confirms, naming the count ("1 of 2 groups have finished... send anyway?"), and the message carries a **PROVISIONAL** banner
- On a tournament round the text **always sends the combined event total**, no matter which scope is on screen
- Settle-up scales to any group size — the old 100-transfer ceiling that silently left debts unassigned is gone, and anything still outstanding is called out on screen

One-Tap Settle-Up (Venmo · Cash App · PayPal)

The **"Settle up — who pays who"** section turns every "who owes who" line into a **one-tap payment**. No money ever runs through Bad Golf — the button opens the other player's Venmo, Cash App, or PayPal **pre-filled with the amount and a note**, so you only confirm inside that app.

- On each settlement line ("You owe Mike \$12.50"), Bad Golf shows a pay button for the payee's **preferred method** (marked ★ in their profile)

- Tap it → your phone opens that payment app (or its web page) with the **amount already filled in** and a note like "Bad Golf — Cedar Crest, Sat"
- If a player hasn't added any handles, the line shows a muted **"No payment info — settle in person"**

Setting up your own handles: Additional settings → **Payment handles** (also offered as an optional step the first time you sign in — you can always **Skip**). Enter any of: **Venmo** username (without the @), **Cash App** \$cashtag (without the \$), **PayPal.me** name or link, and pick a **Preferred method**. All optional. The modal used to say "saved ✓" before the write had even started; it tells you the truth now.

Your handles are only visible to the players in your round, and only so they can pay you. **Tournament settle-up texts carry payment handles too** — they used to go out without them.

NOTE

Payment handles are deliberately never a Pro feature — settle-up stays free forever.

GPS Rangefinder

The GPS is the marquee feature — satellite view of every hole with live distances and course overlay.

Launching GPS

From Score tab:

- **"Score" button** (blue pill below the scorecard) — opens the full GPS view of the hole
- **"Track Shot" pill** — manually log a drive distance

Spectate mode: from the Crew tab's **Live now** list, tap any live round to open GPS read-only, following that player.

It works offline on iPhone. The map library is bundled on the device, so a course with no signal still draws the map.

Distances to Green

Main readout (center-top): **FRONT / MID / BACK** in yards, updating as you move the map pin. Hole number and par flank the Score button; the **Strokes field** sits upper-right.

The map **auto-fits the whole hole** — the green is always in frame, sized to the real yardage bar and score button, and it adapts to any device or notch.

The Right-Hand Bubble Stack

Small heads-up bubbles ride down the right side of the GPS screen. Tap one to jump straight to logging that bet. The money and tracking stacks don't overlap, and long text truncates instead of spilling.

- **Pot of Gold** — this hole's pot, with a sub-line reading **"\$1 n"** or **"+\$X carried"**. Computed live: $\text{base} \times (19 - \text{stroke index}) + \text{carry}$, so the pot escalates by hole difficulty
- **Long Putt** — jumps you to logging the longest putt
- **Long Drive** — the tournament's longest drive
- **LEADER / net +X** — the **Low Net Pool** leader only. It ranks pool players by running net-to-par using the pool's own handicap allowance, and its tooltip reads "Low Net Pool — current net leader."
- **Team Quota** — in a tournament this reads the **whole field**, not just your cart. It names the leading team and the gap to second — e.g. **SHANK +3 · 8 teams** — with **long-press** listing every team, and **tapping it opens the Event Leaderboard scrolled to the Team Quota block** (closing returns you where you were). Dead level reads **TIED**. Outside a tournament it falls back to your round's own teams. If the

tournament can't be read, the bubble stays put and says the standings couldn't load rather than silently rerouting you.

- **Match play status chips** — e.g. **"vs SJ 3 UP"**, including day-level, group-level and cross-group matches inside a tournament. Status only — no money on these chips
- **NET bubble** and bet chips — tap either to jump to the Bets screen

The board bubble recognises you on every device — it's resolved from your account rather than a name saved on that phone. **Back from a money bubble returns you to the same hole of the map.**

The On-Course Scoreboard

Tapping the scorecard overlay in a tournament shows **the whole field**, not just your own cart.

Plays-Like vs. Plays-As (PRO)

"Plays-Like" mode shows **your custom club distances** (from My Clubs) and recommends a club from distance to flag plus wind and temperature. **"Plays-As" mode** (default) shows amateur yardage averages. Toggle between them with the **Mode** button on the GPS overlay.

Target Drag & Layup

- Drag the **target marker** (yellow flag) anywhere on the map; distance updates in real time
- **The map re-frames as you drag** so your ball and the target both stay on screen (zoom is capped)
- Tap a distance pill to snap to front, middle, or back of green

Fairway Center

The **fairway target** (light green dot, if mapped) shows the ideal landing area for par 4s and 5s — the aim point an admin set as the wizard's "target" tap. The rangefinder uses it to suggest the layup yardage. Par 3s don't display one.

Wind & Temperature (PRO)

Wind panel (left side): direction dial (where the wind is blowing **to**), speed & colour (0–5 green, 5–15 yellow, 15+ red), and light streaks drifting across the map. **Temperature panel** shows current temp and a "feels like" carry adjustment. Toggle with the  and **** icons.

Hole Map

Full-colour aerial photo of the hole with tee marker, green outline, fairway and visible hazards. **Pinch to zoom works everywhere in the app** — it used to be disabled app-wide, which was miserable on 9–11px outdoor text.

Find an address: the search sheet lifts above the phone keyboard instead of hiding behind it, the keyboard closes after a successful search so you can see the dropped pin, and **touching the map dismisses the keyboard**.

Minimize the options panel (phone): tap ▼ to collapse the panel and see the whole map; "↗ Show options" brings it back.

Course Preview

Previewing a course always shows each hole **from the mapped tee**, even if you're standing on the property. Live rounds, spectate and mapping are unchanged. Preview also doesn't raise an iPhone lock-screen Live Activity as if a round had started.

Spectate / Watch Another Player

From the **Crew** tab → **"Live now"**, tap any player's row. GPS opens in **spectator mode** (read-only), showing their live location if they've shared it, with scores and shots updating in real time. A dropdown at the top — **"Spectating: [Player Name]"** — switches between players in the same round.

Spectating somebody else's group no longer costs you your own round. The app remembers your round, your hole and your tab, and the ✕ puts you back there. Before, opening **Payouts** → **Group payout** forced your own live round into spectator mode and the ✕ discarded it outright — you could lose your round by looking at your own payout.

Drive Distance Estimate (PRO)

Automatic (if the toggle is on in setup): GPS logs your location at address and compares to the ball location after the shot.

Two accuracy fixes worth knowing:

- The start point can no longer be set more than 15 yards **behind** the mapped tee, and it falls back to the mapped tee if a bad fix slips through. A 168-yard approach used to read **365 y** on a 462-yard par 4
- The app doesn't lock a reading while you're still rolling up to the tee — the start point follows you inside the tee area, and only a genuinely parked position locks a drive. It used to show a ~84-yard drive before you'd hit
- The reading is scaled to **your own tee's** yardage rather than the tips, so a player on the blues sees ~260 y instead of 294 y

Manual (Track Shot button): tap **"Track Shot"** below the Score button, confirm the estimate or type a custom yardage, then **"Share it"** to post the drive to your crew.

Shot Tracking & My Shots Log (PRO)

Tracked shots are saved in **Stats tab** → **My Shots** — a searchable log with date, course, hole, distance, wind, temp and club. Tap **x** to delete any shot.

Club Suggester & My Clubs / Bag (PRO)

"My clubs" (Stats tab): one input per club with a **distance range** in yards, renameable labels, drag-to-reorder, blanks to skip clubs you don't carry, and a **"Reset to standard bag"** button. On GPS, the club recommendation appears on the Plays-Like sheet and updates as you drag the target; **"Pick from My Clubs"** overrides the auto-pick.

NOTE

Opening My clubs from Home and pressing Back (or Save) returns you to Home — it used to dump you wherever you last switched tabs, sometimes a round's money screen.

Apple Watch App

The Apple Watch companion is **live and working**. Sign in on your iPhone and the watch picks up the round automatically — it shows live rangefinder distances, the wind/slope-adjusted plays-as number, and a suggested club from your bag. No separate watch sign-in.

NOTE

Watch changes ship through the App Store / TestFlight build, not the web build, so the watch app can be a release behind the phone.

What It Shows

- **Hole number & par** (e.g. "7 • Par 4")
- **Distance to green** — FRONT / MID / BACK in yards, from the watch's own GPS
- **Plays-as number** — wind/slope-adjusted yardage when the " **Plays-as distance on Apple Watch**" toggle (Stats → Round settings) is ON; turn it OFF for plain GPS yardage
- **Suggested club** — pulled from your My Clubs bag
- **Your score** — swipe to navigate holes

Scoring From Your Wrist

Score a hole on the watch and it **writes straight through to the phone's active round**.

- The phone shows a toast reading " **Score from your watch saved**" and the score lands on the scorecard
- It goes through the same protected save path as a tap on the phone, so it only fills your own cells and correctly updates GIR / sandy / junk tracking
- **Out of range?** The score queues on the watch and flushes automatically the moment it reconnects
- Scores are ignored if there's no live round, the round is finished, you're in view-only mode, or the round doesn't match
- Wrist-entered scores **stay put** — the phone's sync merges instead of overwriting
- Browsing to a different hole on the watch doesn't snap you back to the phone's hole

GPS Stays Warm (Workout Session)

The watch starts a **golf workout session** when a round goes live and ends it when the round clears, so watchOS keeps the app alive with your wrist down.

- Drop your wrist mid-fairway, raise it, and the yardage is there in about a second instead of "acquiring..."
- Because it's a real workout, the round also shows up in **Apple Fitness**
- **First run after installing, the watch asks for Health permission when a round starts — tap Allow.** If Health access is declined, everything still works; GPS just cold-starts on each raise

"Close on Watch" — Getting Out of the App

The watch app used to open by itself with no way to exit. The Scoring page (swipe down from Distance) has a dim **"Close on watch"** button with a confirmation dialog.

- It clears the round from the watch and ends the workout, so the app stops appearing on every wrist raise
- **It never ends or edits the round on your phone**
- The watch stays closed until a new round starts or you tap **"Check again"**

The watch also cleans up after itself: a round cached with no activity for 12 hours is dropped at launch rather than booting into a workout, and simply opening the phone app with no live round clears the watch.

Sign-In & Sync

- Sign in on the iPhone and start (or open) a round — the watch signs in automatically
 - Syncs on launch, **on every wrist-raise**, and whenever it reconnects
 - **The phone answers even when it's locked in your pocket**
 - Yardages re-hand every 8 seconds during a live round
 - **Finishing the round on the phone clears the watch** — no more staring at yesterday's round
 - **"Continue on iPhone"** hands off to the full scorecard
-

Betting Games (35+)

This section details every betting game with rules, setup, and payout logic. Four games are free forever — **Skins, Nassau, Match Play, and Stroke Play Pot** — everything else carries a gold **PRO** badge and is still completely unlocked.

A general rule that changed: several games used to hand the current leader the whole pot from hole 1, or pay nothing at all if you stopped early. Both are fixed. Pool-style games show points (or a "still live" marker) during play and settle at the end, and games that used to require a full 18 settle correctly on a nine or an early finish.

⚠ **Eleven games are unavailable in tournament mode:** Banker, Dynamic Vegas, Splix 6's, Bingo Bango Bongo, Wolf, Hammer, Umbrella, Pot of Gold, Animals, Marks and Hot Potato. That applies to both the director's Configure Day list and a foursome's own group bets. **Normal rounds are unaffected.**

Main Games

Skins (free)

- **Players:** 2+
- **How it works:** The lowest score on a hole wins the "skin". If two or more players tie for low, no one wins — the skin either **carries over** or is **split**, depending on your tie rule.
- **Par-or-better requirement (optional):** the low score must also be at par or better — **net par** or **gross par**, your choice. (On a course with per-tee pars, this is measured against each player's own tee par.)
- **Two formats:** **Per skin** (each skin has a fixed dollar value) or **Pool** (everyone antes; the pot divides by skins won).
- **In Pool format the tie rule is locked to "No skin"** and the control greys out with a note explaining why — a tied hole simply dies and the pot splits only among skins actually won. Switch back to Per skin and your tie rule returns.
- In **Pool** mode, no dollar figures show mid-round (a pool skin is worth $\text{pot} \div \text{total skins won}$, which isn't knowable until the last hole). The breakdown reads a muted count like **"2 skins"** and the money shows at the end. Per-skin mode shows dollars live as always.
- **Its own handicap allowance.** A slider (0–100%, steps of 5, default 100%) labelled **"Handicap for skins"** sets how much handicap counts in Skins. **0% = skins played gross.** It **replaces** the round's handicap percentage rather than stacking on it — a round at 90% with Skins at 80% means 80% of full course handicap, not 72%. Rounds set to "No handicaps", and players marked "plays gross", still get zero strokes.
- **Support note:** the stroke dots on the scorecard show the round-level pops. If Skins is running at a different allowance, the dots and the Skins result can legitimately differ on a hole. That's expected, not a bug.

- **Skins use your COURSE handicap** (index adjusted for the tee), not the raw index. Before v1043 tournament Skins used the raw index and handed every player about two strokes too many — results settled before that build may have gone to the wrong players (the pot total was always right).
- **Payout math:** $\text{pot} \div \text{number of skins won} = \text{per-skin value}$; each player nets winnings minus their buy-in share, shown as **+\$13.33 (2)**.
- **The saved round card prints the setup**, e.g. **Pool – split by skins won · 80% hcp · All players**.
- **In tournaments:** the tie setting is exactly **"No carry overs" / "Carry overs"**. With only one group on the course, Skins settle **live on the leaderboard** as you play — a hole pays as soon as every player in the field has posted a score for it, so a late-entered score can't take a skin back.

Nassau (with Huckle) (free)

- **Players:** 2–5 per Nassau. With 2 it's head-to-head; with 3+ it's group stroke. Add as many Nassaus as you want, each with its own pair/group and wager. There's a **Select all** on the Nassau card, like every other picker.
- **Three separate bets in one:** front 9, back 9, and overall 18 — each worth the same dollar amount.
- **Two scoring formats:** **Stroke play** (lowest total wins each segment) or **Match play** (holes won, e.g. "3&2").
- **△Ties CARRY, in every format.** There is one Nassau rule: lowest net wins each segment, and if a segment ties, nothing settles and the money **rolls onto the next segment**. Any carry left over after the Overall is forfeited. Exception: in a field of more than 10 players where the pot pays 2–3 places, ties still split.
- **Special-score bonuses:** every **birdie, eagle, and hole-in-one** pays a bonus from each other player (Albatross pays at the eagle rate).
- **Huckle (the press):** if you're **down 2+** in any segment — strokes in stroke play, holes in match play — you can call a **Huckle**: a fresh side bet for the same amount, between you and the current leader, from that hole to the end of the segment. The original segment bet plays out separately. **Huckles are available on stroke-play Nassau again** (they'd been restricted to match play since v683). Cross-group Nassau still shows the "Huckles off" note.
- **Quit-early rules:** a stroke segment only settles when **both players completed it** — a player who walks off after 12 holes can no longer win the back or the overall. A fully played front still pays normally; an unfinished segment is void. Group Nassau (3–5 players) pays out on an early finish too; it used to pay nobody.

Stroke Play Pot (free)

- **Players:** 2+
- **How it works:** everyone puts a fixed amount in the pot; **lowest 18-hole total takes it all** (gross or net).
- **Example:** 4 players, \$20 buy-in = \$80 pot; low score wins the whole \$80.

- **Handicap allowance:** the stroke pot has its own **Handicap allowance %** field. ⚠️ **Unlike Skins and Low Net Pool, the stroke pot's allowance still stacks on top of the round allowance rather than replacing it.** If your group expects 80% to mean 80%, set the round to 100%.
- It respects **"Plays gross"** and **"No handicaps"** like every other net game.
- **Quit-early rule:** settles among everyone who played the round's full (shortened) length.

Match Play (1v1) (free)

- **Players:** pair players head-to-head; add as many matches as you want.
- **How it works:** count holes won, not strokes. The match closes when one player can't catch up ("3&2").
- **Setup options:** \$ per match, net or gross.

Banker

- **Players:** 3+ (one banker vs. everyone). **Not available in tournaments.**
- **How it works:** one player is the **banker** each hole; every other player plays a **1-on-1 match against the banker**, each picking their own bet. Low score wins each match.
- **"How is the banker chosen?"** — two modes:
- **Rotation** (default) — rotates through the order on holes 1–15 (configurable cutoff); on the last few holes the **biggest loser picks** who's banker next
- **Pick each hole** — from hole 1, every hole shows the banker picker (tap a player to "Take bank", listed worst-to-best, with **Change pick**). If nobody picks, the rotation order fills in silently. The in-round header reads **"Pick the banker."**
- In pick mode, **"Loser-picks rule starts on hole"** and **"Banker rotation order"** grey out with a tooltip — the rotation order is still saved and still acts as the fallback
- **"Default bet per player (fills in every hole)"** — prefills every player's bet box on every hole, so after hole 1 it's one tap. You can still type over any individual box.
- **Pressing:** any player can **press** (double their own wager); the banker can **press back**, doubling everyone's bet.
- **"Par 3 presses"** (toggle, default OFF) — on a par 3, the **first** press on a given banker-vs-player pairing **triples** the wager and every press after that doubles it. The banker's press-back counts as a press on each pairing independently: against a player who never pressed it's the first press (\$5 → \$15); against one who already pressed it doubles again (\$15 → \$30). Nobody else's math changes, and the setting is stored on the round so every phone settles the same.
- **Birdie auto-double (optional):** anyone making a birdie automatically doubles their match for that hole (or all matches that hole).
- Note: the dollar preview shown while picking a banker computes birdie doubles on net while the real settle uses gross, so the preview standings can differ slightly from the final numbers.

Vegas (4 players, 2v2)

- **Players:** exactly 4

- **How it works:** each team's scores combine into a **two-digit number, lower digit first** — a 4 and a 5 = **45**. The **difference** between the two teams' numbers = points won by the lower team.
- **Team rotation — three options:**
- **Rotate every 6 holes** (default)
- **Fixed teams all 18**
- **Switch teams at the turn (9 & 9)** — you pick the front-nine 2v2 (the picker relabels to **"Teams — front nine"**) and partners **auto-swap on hole 10**, so nobody plays with the same partner twice. A live preview under the picker shows both nines and refuses to guess a back nine if the front isn't a clean 2v2. It settles as **one running total across all 18** (one Vegas line in settle-up), and **the tie multiplier resets at the turn** — a tie on hole 9 does not double hole 10. The on-course banner reads "Front nine · Holes 1–9 · teams switch at the turn" then "Back nine · Holes 10–18 · teams switched", with a **"Show both nines"** table.
- **Boosts:** a **birdie flips** the opponent's number (5+4 becomes 54) — and it genuinely flips against a 10 or higher, which it silently failed to do before. **Two birdies, or any eagle, also doubles** the hole; two eagles ×4. If both teams boost they cancel, but the next hole still doubles.
- **Tie escalation:** a tied hole **doubles** the next hole's bet — **and the doubling is capped**. It used to be unbounded: six ordinary tied holes made hole 7 worth ×64, turning a \$1-a-point game into a \$352 hole. The first hole someone wins clears the streak.
- **Setup options:** \$ per point, net or gross, team rotation.

Dynamic Vegas (4 players)

Same scoring and boost rules as Vegas, but **partnerships shift every hole**: hole 1 is random (deterministic by game code so every phone agrees); on holes 2–18 the **highest scorer** on the previous hole partners with the **lowest scorer**. Ties reuse the previous pairings. **Not available in tournaments.**

6's / Round Robin (4 players)

- **Players:** exactly 4 (2v2 teams)
- **How it works:** partnerships **rotate by segment** so everyone partners with everyone. **Best ball per team** wins or loses each hole's bet.
- **Segments follow the round length** — three 6-hole segments on an 18, three 3-hole segments on a nine.

Splix 6's / Split Sixes (3 players)

- **Players:** exactly 3. **Not available in tournaments.**
- **How it works:** **6 points per hole** — **4 best, 2 middle, 0 worst**. Ties split evenly (two tie for best = 3-3-0; two tie for second = 4-1-1; all tie = 2-2-2).
- **Betting mode 1 — Per-point value:** settled per hole against the field; the average is always 2 points.

- **Betting mode 2 — Buy-in pool:** everyone antes; most points after 18 wins. **Winner takes all** (split on tie) or **80/20**. **The pool doesn't pay out mid-round** — it shows points while you play and settles when the round ends.
- **The banner shows a per-hole line**, e.g. `H15: Tyler 4 +$2.00 · Kevin 2 · Matt 0`.

Niners (5-3-1) — the 9-Point Game

- **Players:** exactly 3 (enforced)
- **How it works: 9 points per hole** by finish order — **low 5, middle 3, high 1**. Most points over 18 wins.
- **Ties split the 9 points:** two tie for low → **4-4-1**; two tie in the middle/high → **5-2-2**; all three tie → **3-3-3**.
- **Blitz (optional, off by default):** win a hole **outright by 2 or more strokes** and you **sweep all 9 points** (9-0-0). A tie for low, or a win by one, splits normally. Tap the "?" beside the toggle for the full explanation.
- **Two payout modes: Pool (buy-in)** — winner takes all or 80/20, settling at the **end of the round** — or **Per-point** (average is 3 a hole).

Stableford

Points against par — **Double Eagle 5, Eagle 4, Birdie 3, Par 2, Bogey 1, Double or worse 0**. High score wins. **Buy-in pool** (winner takes all / 80/20) or **per-point**. Net recommended.

Bingo Bango Bongo

Three points per hole: **Bingo** (first on the green), **Bango** (closest once all balls are on), **Bongo** (first to hole out). Each point earns the winner **\$X from every other player**. Tap the winners on the score screen each hole. **Not available in tournaments**.

Captain (Wolf)

- **Players:** exactly 4. **Not available in tournaments**.
- The **Wolf rotates each hole**. After watching the others tee off, the Wolf either **picks a partner** (1v1 against the other two) or goes **Lone Wolf** against all three (2x). **Blind Lone Wolf**, called before anyone tees off, is **3x**.
- **Example:** \$2 Wolf bet, you go Lone Wolf (\$4). Win → each opponent owes you \$4 (\$12 for the hole). Lose → you owe \$4 to each.
- The captain rotation order has been reviewed and is deliberately as written.

Hammer

- **Players:** 2+ (any number in Individual; exactly 4 for Team). **Not available in tournaments**.
- **How it works:** match play with a **doubling cube**. At any time a player can **throw the hammer** to double the stake; the opponent **accepts** (bet doubles, they get the hammer next) or **declines** and concedes the hole at the current bet. Low score wins the hole and the pot; halved holes can carry (optional).

- **Format: Team (2v2)** (default) — two fixed sides, best ball, winners split the pot, declining concedes for both partners — or **Individual**, where every player declines for themselves and pays the current stake, split among whoever is still in.
- **Team 2v2 pays the same as 1v1 at the same setting.** It used to pay half.
- **Watch how it works:** the Info tab's Hammer card leads with a "► **Watch how it works**" button that plays a short vertical how-to video in the app.
- ⚠️**Setup gotcha:** the **net-match checkbox defaults to checked (net scoring ON)**. Tapping it turns net off.

⚖️High & Low (2v2)

An **even** number of players, **4+**. **Two points per hole:** one to the team with the better **LOW** ball, one to the team with the better **HIGH** ball. A tied ball halves that point. Optional birdie-double. Settle on the point difference × \$/point. With the 8-player cap, this game blocks at 7 players — it needs an even field.

Team Match Play

Any even-sized teams. Each hole the **better ball** on each team competes; the match closes when a team can't catch up. **If your partner picks up, your ball still counts** — a single missing partner score used to void the whole hole.

NOTE

In a tournament with 3 or more teams, Team Match settles per cart — each cart is a genuine two-team match — and the money is routed into the group pool so nothing goes missing. With two teams it still merges field-wide exactly as before.

Team Low Ball

Same teams, but **sum each team's best ball over all 18 holes**; lowest total wins. Same per-cart rule as Team Match in a 3+ team event.

Quota (Points)

- Each hole earns **Albatross 8, Eagle 6, Birdie 4, Par 2, Bogey 1, Double or worse 0**. Quota target: **Auto = 36 – handicap**, or Manual. Your result = points earned – quota; furthest **over** wins.
- **On a nine, both halves scale** — it used to use the 18-hole target of 36 while still subtracting your full 18-hole handicap.
- **Wager:** buy-in pool (winner takes all / 80/20) or per-point.
- **In a tournament:** a group's own Quota game settles when **your** round finishes.

Team Quota

Even teams; **team total = sum of each member's (points – quota)**. Higher total wins.

It's a pot game now — there is no settlement dropdown. You type a buy-in and the winning team splits the pot. The screen does the maths for you:

NOTE

"Pot: \$80 (4 × \$20). Winning team splits it — about \$40 each, so roughly \$20 up on your ante."

- A **\$0 buy-in** shows an amber box saying **no money will settle**
- **There's no Net/Gross dropdown either** — quota is always scored gross, because the handicap is already inside the 36 – handicap target. The old control had one option and the engine ignored it
- **Blank manual quotas are named out loud:** "Team Quota: no manual quota set for Tyler, Chris, Frank +5 more — they default to 36."
- Rounds already set up per-point keep settling on their original terms; reopening one shows an amber note plus the per-point field so it can still be edited
- **A withdrawal is expensive** — unplayed holes score 0 against that player's full quota
- **Individual Quota is untouched** and still offers both pool and per-point

In a tournament, Team Quota is a **field-wide pot** with three payout shapes — **winner takes all, top 2 at 70/30**, or **top 3 at 50/30/20** — and the maths shows live. 16 players at \$20 = a \$320 pot; winner-takes-all pays the winning pair \$160 each; 50/30/20 pays \$160 / \$96 / \$64. See [Tourney Tab](#).

Three honest messages replace the old blanket "teams are uneven":

Message	What it means
Team Quota — settles event-wide	Normal on a tournament round. It pays out once across the whole field; the money shows on Tournament Results, not your group's board
Team Quota — not settling	The teams genuinely are uneven, and it names the counts (e.g. 9 v 7). The "even the teams up in round settings" advice only appears on a live, editable round. Nothing has been charged
Team Quota — didn't settle	"The teams look even (2 v 2), so this needs a look." No invented reason

Ryder Cup (2v2, 3 segments)

- **Players:** exactly 4
- The round splits into three segments, **each a different format — Best Ball, Scramble, or Alternate Shot** — in the order you choose. **Segments follow the round length** (3/3/3 on a nine).

- **Scoring:** 1 point for a hole win, 0.5 each for a halve. After the round the winning team collects **point differential × \$/pt per player**.
- Scramble and Alternate Shot holes show a **team score entry panel**.
- **A 9-hole cup match becomes final** — it used to show a projection forever while the official total stayed 0–0.
- **Team handicap allowance** is settable (see Scramble below).
- **In a multi-team event:** Ryder Cup settles correctly **per cart** and feeds the per-team cup table, so it's usable — but there is **no event-wide N-team format**. There's no bracket, no round-robin and no fixture list; the matchups are whoever the commissioner seated together. Ryder Cup remains three six-hole segments inside one foursome, not field-wide sessions.

Scramble

- **How it works:** both (or all) players hit, the team picks the best shot, and everyone plays from that spot. One team score per hole. A scramble is scored against the card par, not per-tee par.
- **Wager:** match play (most holes won) or stroke play (lowest total). **Match-play scrambles closed out early pay** — a match won 6&5 used to settle \$0 — and **9-hole scrambles pay too**.
- **△Picking Scramble switches off the games that can't work.** A scramble team plays one ball, so there's no individual score for Skins, Low Net, Most GIRs, Fewest Putts, Nassau, Stroke, Banker and the rest to settle on. Ticking **Scramble** disables and dims **30** game toggles, unchecks them, shows a tooltip explaining why, and toasts once saying how many were switched off.
- **Survivors that still work with a scramble:** Scramble, Closest to the Pin, Long Putt, Long Drive and Greenies (a team birdie still counts for the birdie pool).
- **Team handicap allowance:** a checkbox (plus an optional custom percentage) on both the Scramble and Ryder Cup option panels, off by default. Defaults are the USGA standards — **2-man scramble 35% of the lower handicap + 15% of the higher; alternate shot 50/50**. "No handicaps" still overrides it.
- The 4-man (one-team) scramble allowance is not implemented — the checkbox is hidden in 4-man mode and that format plays straight gross.
- **Field scramble (tournament):** see **Scramble Pot** under Tourney → Event Pots. In a multi-team event a scramble day settles per cart, same as Ryder Cup.

☂Umbrella (4 players, 2v2)

Five points a hole, **each worth the hole number** — 1 apiece on hole 1, 18 apiece on hole 18. The five points: **Low ball**, **Low total**, **GIR (partner 1)**, **GIR (partner 2)**, and **Birdie**. Win a point outright to take it; a tie awards it to nobody. ☂**The umbrella:** sweep all five while the other team scores zero and that hole's points **double**. **Not available in tournaments.**

Example: on hole 8 you win low ball, low total, one GIR and the birdie — $4 \times 8 = 32$ — but they grab the other GIR, so no umbrella. On hole 12 you sweep all five: $5 \times 12 = 60$, doubled to **120**.

NOTE

The two GIR points need GIR tracking turned on for the round.

Pot of Gold

- A separate **dollar pot rides on every hole, weighted by difficulty**, and the low score wins that hole's pot from everyone else. Each hole's pot is $\text{base} \times (19 - \text{stroke index})$ — the **hardest hole (SI 1) is worth 18× the base**, down to 1× on the easiest. **Not available in tournaments.**
- ⚠️ **The "base" is not dollars-per-hole.** A **\$1 base totals \$171 per opponent over 18 holes**. The setup field says so.
- **On a nine the weights scale to the nine** (9× down to 1×) — they used to run 18×–10×, so a nine played for about 2.8× the intended money.
- **Carryover (optional):** a tied hole's pot rolls onto the next hole until someone wins it outright. Off, a tie splits that hole's pot. **A carry left at the end settles on low total**, and voids if the total is still tied — it used to just disappear.
- **On GPS:** the **Pot of Gold bubble** shows this hole's pot with **"SI n"** or **"+\$X carried"** underneath.

Animals

A running side game of penalty **animals**: **Gorilla** (OB) · **Snake** (3-putt) · **Shark** (water) · **Camel** (bunker) · **Jackal** (shank) · **Dolphin** (two waters) · **Crab** (two bunkers). Each animal **passes to the last player who did it**, so only the **final holder** pays. Birdies, eagles and albatrosses cancel penalties out. Animals and Long Putt can't run at the same time. **Not available in tournaments.**

Marks

A **highlight-reel game — most marks wins, not lowest score**. Earn a mark for GIRs · sandies · chip-ins · **fishies** (par after a penalty) · **darts** (closest on a par 3) · **muscles** (longest drive) — plus birdies, eagles and albatrosses off the card. **Not available in tournaments.**

Hot Potato

One token nobody wants. Pick a **trigger** at setup — 3-putt, double bogey, OB, or water — and tap who just did it; the potato moves to them **and doubles every time it changes hands**. Whoever holds it after the 18th **pays the current value**, split among everyone else. **Not available in tournaments.**

⚠️ **The doubling is capped — at 64× (six doubles)**, with **one move per hole** (last tap wins). It used to be uncapped: 12 passes on a \$1 game reached \$2,048, and a single hole could double the pot twice.

Round Pools (whole-group pots)

Three pools where everyone antes the same buy-in and the single best result takes the whole pot; **ties split it evenly**.

How all three behave:

- Nothing pays out until **every player in the pool has all their holes entered** (9-hole rounds work too), so no money shows mid-round. **They do settle on a round you finish early** — they used to return nothing at all and the money just disappeared with no row and no message
- If **nobody qualifies**, the pot is **void** and no money moves
- **Player picker**: each pool **pre-selects everyone** the first time you switch it on — you only tap to take someone out, and players added mid-round are auto-included. A deliberate "Clear all" stays cleared. A player left out neither pays nor can win, and his unfinished card doesn't hold up the payout
- **In a tournament**: these three are hidden from the director's Configure Day screen (the Event Pots cover that), but each foursome can run them as their **own group bet**

Low Net Pool

- The **lowest NET score over 18** takes the pot.
- **Its own handicap allowance slider** (0–100%, default 100%), labelled "**Handicap for Low Net Pool**". **0% = the pot plays straight gross**. Like Skins, the allowance **replaces** the round percentage rather than compounding with it — an 80% pot inside a 50% round used to actually play at 40%.
- It measures off your **tee-adjusted course handicap**, and respects "**Plays gross**" and "**No handicaps**".
- **Worked example**: 4 players at \$5 each (\$20 pot). Player A has the best net → **A +\$15**, the other three – \$5 each. If A and B tie → **+\$5 / +\$5 / –\$5 / –\$5**.

GIR Pool

The **most greens in regulation over 18** takes the pot. **Turning this on switches GIR tracking on automatically**, and a toast tells you it did. If nobody makes a single GIR, the pot is void.

Fewest Putts Pool

The **fewest total putts over 18** takes the pot. **Turning this on switches putt tracking on automatically**. You need a putt count on every hole you score — a player missing putt data **can't win** it but still pays his ante.

Side Bets

Par 3 Greenie (with optional Hero Tax)

- **Applies to**: par 3 holes only. The par-3 list comes from the course card, not from each player's tee — it's one shared contest.
- Mark the player **closest to the pin** on the green. Default \$5 per other player.

- **Must make par or better to win** — unless you turn on the option below.
- **Hero Tax (optional penalty):** if the Greenie winner **3-putts**, they **forfeit the payout** and **pay each other player a fixed Hero Tax** (default \$5). A sub-row on the scorecard asks "Did the greenie winner 3-putt?" and the chip crosses out.
- **"3-putts still win" (default OFF):** turn it on and you no longer need par or better to collect, a 3-putt doesn't forfeit, and **Hero Tax is switched off entirely** — its row disappears from the score screen and the game header reads "pays no matter what."
- **In a tournament:** under the tournament scope, the Greenie card merges **every group's** greenie events into one hole-sorted list.

Closest to the Pin

- **Applies to:** any holes you choose (usually the par 3s)
- **Per-hole mode (default):** every player antes; the group marks who stuck it closest (ball must be on the green) and logs the distance in **feet and inches**. Closest takes that hole's pot. **A winner logged with no distance still wins the hole** — someone from another group with a measured distance beats them.
- **Pool mode (toggle in the CTP options panel):** CTP becomes **one single pot** — everyone antes once, the player with the **most CTPs takes the pot**, ties split, settling at the end.
- **Money example:** 4 players at \$5, A wins 2 CTPs to B's 1. **Pool mode:** A +\$15, everyone else -\$5. **Per-hole:** A +\$25, B +\$5, C -\$15.
- **CTP sits in the main Betting games list**, not buried in Side Bets, with its hole picker, pool-mode toggle and participant picker.
- **With one group on the course, CTP settles live** as you play, recomputing if someone logs a closer shot later.
- **Tournament rounds:** entries combine across groups. A CTP added after a day has launched reaches the groups — each group's round heals itself when opened.

Long Putt

Everyone antes; the **longest putt of the round** wins the pot. Tap who holds it and log the distance; update any time someone drains a longer one. The **bubble** on GPS jumps you straight there. **With one group on the course it settles live**. In tournaments, the longest putt across the **entire field** wins one pot — and **every group is included**.

NOTE

Switching Long Putt on mid-round now reaches every phone. The repair check used to run once per session and treat a failed read as "the pot is off", so a device that looked at the wrong moment never looked again; it re-checks every couple of minutes now.

Long Drive

Everyone antes; the **longest drive on the designated hole** wins the pot. The organizer marks the winner and an optional yardage — **there's no auto-measure**. Available in normal rounds, not just tournaments.

Birdie Bump

- Pays per great shot with **no tracking required** — it reads straight off your scorecard. Configure **three dollar amounts: birdie, eagle, and hole-in-one**. Any participant who makes one **collects that amount from every other participant**.
- **Example:** \$10 birdie, 4 players → a birdie collects $\$10 \times 3 = \text{\textbf{+\$30}}$.
- **An eagle can never pay less than a birdie.** If you left Eagle blank an eagle used to pay \$0 — the player who made it actually *lost* money to the birdie makers. Same for an ace with no hole-in-one amount, which falls back to the eagle rate.
- **Birdie Bump pays during play**, like every other group bet — it used to sit at \$0 in running totals, the GPS money bubble and the group board all day and only appear at the end.
- **In a tournament, it now actually pays.** Birdie Bump on a tournament group round used to appear on the bets list and then settle **\$0 for everyone** — the pot never reached group totals, group bets or who-pays-who. On a tournament group round, a missing participant list is read as **"this group"**, and the money lands where it should. *There is no field-wide Birdie Bump — it's a group-level game only.*
- **On a casual round, Birdie Bump still refuses to settle with no participant list.** That's deliberate: there, an empty list means the setup was never finished.
- *(This is the game formerly called "Birdie Pool" — only the display name changed; old rounds still resolve correctly.)*

Junk Bets (toggle each independently)

Each junk bet pays **\$X from every other player** to whoever earns it. Multiple players can earn the same junk on a hole, and one player can earn several junks on one hole.

Bet	Trigger	Auto-fill
● GIR	Ball on the putting surface in par – 2 shots	with GIRs tracking on
Sandy	Par or better after being in a bunker	with Sand saves tracking on
Rolo	Par or better after taking a penalty stroke	with Penalties tracking on
Barkie	Par or better after hitting a tree	manual
Polie	Make a long putt — typically 10+ feet (group sets the standard)	manual
Snake	Whoever 3-putts gets the snake ; holder at the end pays out (defaults to \$0.50)	manual
Arnie	Par without hitting the fairway or the green in regulation	manual — needs Putts tracking on to award at all
Chip-In	Hole out from off the green for par or better	with Putts tracking on (putts = 0, par or better; an ace is excluded)

- **A hand-tapped chip always sticks.**
- **Known limitation:** when junk is configured as a tournament **group** bet, the chips render and are tappable but **GIR / Arnie / Sandy auto-fill doesn't fire** — tap them by hand in that case.

Hydration Bets (sip trackers — no money)

Just-for-fun sip trackers that ride along with any round — **no money changes hands, nothing touches your bets or lifetime stats**, and they're **never** Pro features. Turn on "**Sips-of-water mode**" in Setup to keep it dry. **Auto** games read the scorecard; **manual** ones use the chip on the score row. At round end the **Sip totals** card colour-codes everyone green (dry) to red, and the player with the most sips wins "**Do the Dance**" — a tap-to-dismiss dancing-chicken send-off.

Game	Trigger	Sips / Logging
In the drink	Find a water hazard	1 · manual chip
Bunker / Sand trap	End up in a bunker	1 · manual chip
OB / lost ball	Out of bounds or lost ball	2 · manual chip
Whiff	A full air-swing	1 · manual chip
Worm burner	Top it off the tee	1 · manual chip
Chunk & skull	Fat or thin chip that never reaches the green	1 · manual chip
Three-putt	3+ putts on a hole	1 · auto (needs Putts on)
Loser drinks	Highest score on the hole (ties → all tied drink)	1 · auto
Par or drink	Anyone over par — bogey 1 sip, double+ 2	1–2 · auto
Honors pours	Winner of the last hole hands out the sips	1 · auto
Snake (hydration)	3-putt holds the snake; holder at 18 finishes their drink	auto
Wolf	Rides along with the Wolf game	1 · auto
Tee box toast	Everyone sips on every tee box	1 each · auto
The Turn	Finish your drink after hole 9	auto
19th hole tally	Bank every offense and settle at the clubhouse	running total
Sip totals & "Do the Dance"	End-of-round summary	—

Changing a Bet Mid-Round

- **Dollar-amount changes apply retroactively to all 18 holes** — including holes already scored.
- Editing a game **after a round has started actually updates that live round**. A toast reports what happened, e.g. *"Saved — updated 2 already-started rounds with these games"* or *"Saved for future rounds — 1 group already finished, so it wasn't changed."*
- **Already-finished rounds are never retroactively changed.**
- **⚠️ Re-check your per-hole winners after editing a live round's bets** — re-saving the games has been seen to clear already-logged Greenie (and potentially junk / CTP / long-putt) entries.

Removing a Player Mid-Round

Ten team games (Team match, Team low ball, High & Low, Umbrella, Ryder Cup, Scramble, Vegas, 6's, Team Quota, Hammer) correctly refuse to settle when the teams no longer match the player list. They used to do it **silently at \$0**; the round flags the calculation error so you know why.

Info Tab (Rules & Help)

The **Info** tab (More → Info) is the app's built-in **rulebook and help center** — the authoritative source for every game's scoring, settlement, and setup.

What's inside:

- **Games** — an expandable card per Main game with **How it works** · **Example** · **Setup options** (Skins, Nassau with Huckle, Stroke pot, Banker, Vegas, Dynamic Vegas, 6's, Splix 6's, Niners, Bingo Bango Bongo, Stableford, Captain/Wolf, Hammer, Match play, Team match, Team low ball, High & Low, Ryder Cup, Scramble, Quota, Team Quota, Umbrella, Pot of Gold, Animals, Marks, Hot Potato, Low Net Pool, GIR Pool, Fewest Putts Pool)
- **Side bets** — Par 3 Greenie (with Hero Tax), Closest to the Pin, Long Putt, Long Drive, Birdie Bump, GIR, Sandy, Rolo, Barkie, Polie, Snake, Arnie, Chip-In
- **Hammer video** — a "► **Watch how it works**" button that plays a short vertical how-to video in an in-app popup
- **Auto-fill notes** — Rolo and Chip-In carry an "Auto-fill" paragraph explaining which tracking toggle powers them
- **Hydration** — every sip tracker
- **Quit-early settlement rules** — how match-style games, the Stroke Pot, and per-hole games each settle if you stop before 18
- **Live tweaks** — dollar-amount changes mid-round apply **retroactively to all 18 holes**
- **Handicap, par, stroke-index, and tee rating/slope explainers** — including "The 'TEMP' badge" and "Good to know"
- **Documentation & legal** — links to this Player Guide PDF, the Admin Guide (admins only), the Privacy Policy and the Terms

Games and side bets carry the gold **PRO** pill here too. The **handicap and help topics are never badged** — they're not games. Hydration entries aren't badged either.

Game icons in the Info tab match the icons on the round-setup tiles.

Sending Feedback

" **Share feedback**" (Home) opens a short form for course problems, bugs and ideas.

- Type your message and optionally tap "**Add screenshots**"
- Tap **Send feedback** — it lands in the admin **Feedback inbox**
- The sheet shrinks and scrolls so **Send** is always reachable above the keyboard
- Tapping the backdrop **closes and keeps your draft** (with a toast saying so); **Cancel** asks before discarding; only a successful send clears the form

There's also a separate **Contact us** form for course problems and general questions.

Stats Tab

The Stats tab (More → Stats) is your personal dashboard — handicap, round history, club setup, tracking history, and account management.

Handicap Index (WHS)

Display:

- Large **handicap number** (to one decimal)
- **Status label:** "Established" (5+ rounds), "Provisional · best round avg" (under 5), or a **TEMP** badge
- **"Share handicap"** — export your index + recent rounds (a placeholder number is marked "(TEMP)")
- **"🔄Recalculate handicap"** — re-rates your saved history with the current math

How it's calculated — matched to GHIN/WHS:

- **Differential** = $(\text{Score} - \text{Course Rating}) \times (113 \div \text{Slope})$ — using the **women's** rating/slope for players whose profile gender is Female (when the tee has them)
- The **number of differentials that count** follows the official USGA bands. **The "counting rounds" labels on screen now match the engine** — the ✓ marks on the trend chart and the "Lowest X of Y rounds count" subtitle were still printing the old pre-v924 table, so at **11 rounds and again at 13–19 rounds** they contradicted the index the app was actually showing (15 rounds read "Lowest 6 of 15" while the engine used the lowest 5). All three surfaces agree now
- Hole scores are capped at **net double bogey** before the differential is calculated — $\text{par} + 2 + \text{your strokes on that hole}$ ($\text{par} + 5$ if you have no course handicap yet). **Your real gross score is untouched everywhere else.**
- **9-hole rounds are not simply doubled** — they use the WHS 2024 expected-differential formula
- **Weather-adjusted scores don't feed the index** (the display per round stays)
- Rounds without a complete round or a rating/slope are skipped
- **Rounds from a tournament that has since been deleted no longer count** — see below
- Fewer than 5 rounds = **provisional**

Support script for a wrong-looking index: update the app, then **Stats** → **🔄Recalculate handicap**. (For old rounds the recalculation approximates using the player's current roster handicap and default stroke index, since those weren't archived at the time.)

Not implemented: soft/hard caps against the 365-day Low Handicap Index (Rule 5.8), exceptional score reduction (Rule 5.9), and official PCC. Bad Golf matches GHIN's everyday math, not the full rulebook.

One handicap everywhere. Each qualifying account **publishes** its index (plus round count, holes basis and timestamp), and every other device reads that number — so the same golfer can't show 3.1 on one login and 2.6 on another. Guests, and anyone who has never published, fall back to the locally calculated index. To correct someone's index everywhere, correct it on the account that owns the name.

Automatic recalculation: your handicap recalculates every time you finish a round or add a past round. The differential for each saved round is re-derived from that course's current tee rating/slope, so correcting a course's rating updates your index next time a round is saved.

Missing Rounds Fix Themselves — and "Resync my stats"

The symptom this cures: a round shows up in your **Rounds** list but is missing from your handicap box, your **Lifetime Bets** and your bet history — because stats are only written by the phone that taps **Finish round**. If somebody else kept the card and closed it out, your phone could sit for hours with the round missing from every tile.

Now it heals itself. A finished round in your Rounds list that's missing from your stats is pulled in automatically the next time the Rounds tab or the Stats page loads, and the page redraws straight away.

- Deliberately limited to **finished** rounds (live rounds stay out of stats), **rounds you're actually a player in**, and **never a round you deleted** — local deletes and shared tombstones are both honoured
- Up to 10 recovered per pass

Partial rounds that carried real money now count toward Lifetime Bets. A round used to need to be complete or carry a gross score, so walking in after 14 holes down \$42.50 silently vanished from bet history. Genuine ghost rows (\$0, no gross, no holes) are still excluded.

Manual escape hatch: Stats → tools → "Resync my stats", beside Recompute fairways. It rebuilds your stats from every finished round in your Rounds list and reports what it found — e.g. "Recovered 2 missing rounds ✓ (37 refreshed)". It's safe to press twice.

Differentials & Round History

"Differentials" section lists recent rounds with **date**, **course**, **gross score**, **differential**, and **tee played**. Tap any round to view the full scorecard. Tournament rounds carry a **trophy**.

"Add past round" — log a round from before you used Bad Golf: date, course, gross score, tee, holes played. It counts toward your handicap if it has a complete round + full rating/slope data.

- The date defaults correctly (it used to pre-fill tomorrow when you logged a round in the evening)
- Double-tapping **Save** can't create two handicap rounds
- **Cancel doesn't silently wipe an 18-hole entry** you just typed

"Remove this round from my stats" on a round card works on iPhone (it used to silently do nothing).

Scoring Trend Chart

The chart diverges around your **average line**: a round under your average rises **above** the line, a round over it drops **below**, and bar length is how many strokes off average you were. Rounds that count toward your handicap index are solid colour with a ✓; non-counting rounds are faded — using the exact same rule as the Handicap Rounds card, so the two can't disagree. The average value, the **"Above the line = better"** hint and the legend are real text that scales with your phone's font size.

Detailed Statistics

Stat tiles (tap any to drill down): GIR %, Fairways %, Putts / round, Penalties, Sand saves, Avg score, Rounds played. A player with no data yet sees **N/A** rather than a missing box.

NOTE

The Hole-by-Hole breakdown used to print nonsense like "(+0.4 over par on average)" for a player who was under par on a hole. Fixed.

Filters: player select (view another player in the roster), date range.

NOTE

Basic tiles are free; the deeper drill-downs carry a PRO badge.

Lifetime Bets — and Why It Can Disagree With Settle-Up

A round only counts toward Lifetime Bets if it was scored to completion or carried real money. Settle-up settles whatever money exists right now. Play nine holes for \$20 and never finish the card and settle-up shows \$20 while Lifetime Bets shows \$0 — unless money actually changed hands, which now does count.

Two more things worth knowing:

- **Tournament pot winnings count.** Event pots (Skins, Nassau, Long Putt, CTP, GIR pool, Fewest Putts, Stroke pot) were never included in lifetime money — only your group's own side bets were. Every event pot in the app's history was missing before this, so older lifetime totals were understated
- **Multi-day event money is counted once.** A two-day event used to record your winnings on both days and show double; the full event net now lands on one round and the others read \$0, and older entries repair themselves
- A round deleted on one phone drops out of that phone's Lifetime Bets immediately, while a second phone keeps counting it until the deletion syncs

Rounds From a Deleted Tournament

When a commissioner deletes a tournament, the rounds played in it used to keep the trophy forever, pointing at a screen that could never load — and they kept counting in everybody's numbers.

What happens now:

- **No round is ever deleted.** Every score, every card and every dollar stays exactly where it is
- The trophy stops being drawn, and the summary's **Tournament results** button hides
- Those rounds drop off the **Rounds** tab, **Home** → **your rounds**, and friends' stats round lists
- **They stop counting in the numbers** — handicap index, Lifetime Bets, average score, best round, round count, hole-by-hole, the differential chart, the you-vs-friend comparison and crew board totals. (A measured example: 20 rounds became 10 counted, index moved 10.9 → 10.3, lifetime money \$200 → \$100 — with all 20 rounds still stored.)
- **The deletion syncs to the other players' phones** now — on launch, and at most every 10 minutes while the app is open. Before, only the phone that pressed Delete knew
- The old ambiguous **"Tournament not found"** message is now two distinct ones: **"That tournament was deleted"** vs **"Couldn't reach the tournament — try again."**

Round Settings Card

"⚙️ **Settings**" (collapsible):

Round pop-ups — birdies & eagles · sips · blowups, on **this phone**.

Smack-talk voice — on/off for this phone, with a package selector (generic or Spanish/Roland).

Stats visibility — **Everyone** · **Friends only** · **Just me**. (When two accounts share a name the app keeps the more restrictive setting of the two. A change that doesn't reach the server now says so — this is a privacy setting and it used to confirm silently either way.)

Drive distance estimate — auto-log drive distances from GPS.

Alert friends — notify friends when you start a round.

Plays-as distance on Apple Watch — wind/slope-adjusted yardage on the wrist, or plain GPS yardage when off.

Push notifications card — round start, round added, friend requests, and tournament group launches.

Cloud Backup

If a restore can't reach the cloud, the app says so. It used to report **"No cloud backup found for your account."** on a failed read, which invited people to re-enter rounds that were sitting safely in the cloud the whole time.

My Clubs (PRO)

Define your real bag's distance ranges so GPS recommends from **your** clubs instead of amateur averages: one input per club with a **distance range in yards**, custom labels (e.g. "PW 45°"), blanks to skip clubs you don't carry, drag-to-reorder by the  handle, and a **"Reset to standard bag"** button.

My Shots (PRO)

"My shots" logs drive estimates and tracked shots with date, hole, course, distance, wind, temp and club. Searchable and filterable; tap  to delete a shot.

Rounds Tab

The Rounds tab holds open rounds, scheduled rounds, your saved round history and round templates. (This is the tab formerly called Events. Tournaments live on Tourney.)

Your rounds are yours. Every account used to read and write one shared list, so everyone saw everyone else's rounds. Rounds are stored **per account**.

Past Rounds List

- Cards sorted by date (newest first) showing **date**, **course**, **players**, **final score**, **status**, and the **home / away** badge
- **trophy** marks a round played as part of a tournament (it disappears if that tournament is later deleted)
- **"Search course or player..."** finds rounds by course or player name
- **View** on a completed round opens the **Bets sheet**
- The list paints from cache immediately and quietly refreshes a moment later if anything actually needed correcting

Why a finished round sometimes sits at the very top: the top section shows live rounds **plus** finished rounds that never made it into your stats history. A finished round up there is a deliberate signal that it wasn't recorded to your stats — not a sorting glitch. (Most of those now heal themselves — see "Missing Rounds Fix Themselves" above.)

View Round

Tap any past round card to open the **Bets sheet** — final scores, money settled, the full scorecard with gross and net, the whole-event block on a tournament round, and **Reopen round**.

Deleting a Round — Who It Affects

- **"Delete round"** removes the round **from your list only**. Other players keep it. If it counted toward your handicap, it's removed and your handicap recalculates
- **If you aren't the host**, deleting only removes it from your phone and the app says so: **"Removed from your rounds — only the host can delete it for everyone."**
- **When the host uses "Delete for all"**, **everyone else's phone closes the round in real time** with "This round was deleted by the host." Players used to keep scoring a round that no longer existed
- **Deleted rounds stay deleted.** Deletions are recorded permanently and merged rather than overwritten, so a friend's stale copy can't revive one — and a round you deleted drops off the Crew tab's **Live now** immediately

- **A personal removal can never become a global delete.** It used to: the confirm dialog promised "Other players keep it" while actually deleting the round for every user and stripping it from every player's score history, which dropped their handicap index. Personal removals go to a private per-user list

A stranger's round in your list? If someone in the library shares your name, their round can land in your list. Remove it with the "x" next to the row and choose **"Just my list"** — **never "Delete for all."**

Manual / Past Round Entries

"Add past round": date picker → course search → gross score → tee → holes played (9 or 18) → **Save**.

Scheduled Rounds

- The list is **personalized to you** — only scheduled rounds you're actually in, plus templates you created
- Tap a scheduled round to **edit its setup or start it now**; tap a template to load the whole setup into Play
- Phantom **"SCHEDULED"** rows left behind by a duplicate launch clear themselves on the next load

Invites

- Every invite type — round, tournament, open round — **expires after 14 days**
 - Finishing a round, deleting it for everyone, an admin ending it, or deleting a tournament all **retire that round's invites for everyone at once**. No more Join buttons that lead nowhere
 - **"Grab a spot"** can't be double-tapped into two seats
 - **An invite you accept now tells you if it didn't go through** — accepting used to report success either way
-

Times Tab (Tee-Time Calendar)

The **Times** tab (More → Times) is a shared **tee-time calendar** for you and your crew. It opens on today, shows the next ~30 days at a glance, and pages a full **12 months** ahead. It's free, not a Pro feature.

The Calendar

- Opens on the **current month with today highlighted**
- ◀ ▶ arrows page months; the **"Today"** button jumps home
- Each day cell shows a **compact count** ("3"); days with open public slots get a subtle accent dot
- **Tap a day** for that day's tee times in time order — time, course, spots open ("2 open / 4"), who's in, and a **Public / Private** pill
- **Tap a tee time** for the full roster and the actions you're allowed to use (Join, Invite, Add player, Edit, Cancel)
- **Finished rounds don't advertise seats** — a closed row reads **"Played"** or **"Closed"**
- **Past days are read-only** — visible but dimmed, with no **" + Add"**
- **Duplicate rows collapse** — a round restarted under a second code shows once

Adding a Tee Time

Tap the sticky **" + Add tee time"** button:

- **Course** — pick from the library; you can add **several courses** in one batch
- **Day(s)** — one date, several dates, or a range
- **Time(s)** — one time, or several on the same day (7:40, 7:50, 8:00), with an **"🕒 Auto-fill times"** helper
- **Group size** — how many spots the tee time holds (default 4). **Open slots = group size – players already in**
- **Players (optional)** — pre-seat anyone you know is coming
- **Public or Private** — Public = all your friends/crew can see and join; Private = only people you invite

Pick 3 courses across 4 Saturdays and Bad Golf creates all 12 tee times together. A fast double-tap on Save can't create two tee times and two rounds of invite pushes.

Filling the Spots — Invites & Auto-Add

- **Invite: "Invite to this tee time"** sends an in-app invite (with a notification) or opens the **share sheet** with a join link
- **Add player (auto-add):** as the creator, add a crew-mate straight into a spot — they still get a notification ("Tyler added you to a tee time at Cedar Crest, Sat 8:20am") and can drop out

- **Move players around:** drag anyone between tee times with their dropdown
- When every spot fills, the tee time closes and rolls into your **Scheduled Rounds**

Telling Players Apart

- **Full names** on the top line, with a second line showing up to two of **crew · home course · handicap** (a placeholder handicap is marked **(TEMP)**)
- **Colour-coded avatars** — each player gets a consistent colour when they have no photo
- The list is **ranked** crew first, then whoever you've played with most recently, then alphabetical

Sharing the Calendar

"Share calendar" opens the share sheet with a link. Whoever opens it lands on the Times tab and sees your **public** tee times. Private slots never show through a shared link unless that person was individually invited.

Tourney Tab (Events & Tournaments)

More → **Tourney**. Events are big-group outings — 6+ players, multiple carts, one leaderboard. (The "+ New event" button carries a PRO badge.)

Creating a Tournament

Four event types, each explained in the dropdown as you select it:

Type	What it is
Two Large Teams	the classic two-sided event
4 Person Teams	four-player teams
Small Teams (2-man)	a field of two-man pairs
Individual	one day, many carts, one leaderboard

Setup flow: name and date range → players → teams → courses (one per day if multi-day) → betting games → save and share the invite link.

Small Teams (2-man) replaces the two team-name boxes with a **"How many 2-man teams?"** picker, pre-filled from your player count, and prints a live sanity line — e.g. "Perfect — 16 players makes 8 pairs. Two whole teams ride in each cart." You name the teams afterwards under **Team names & logos**, so you're not typing eight names before the event even exists. **24 players / 12 two-man teams** is the tested maximum.

Other creation behaviour:

- **The form starts empty** — it used to bring back the previous tournament's name, team names, location and settings
- **No accidental duplicates:** the create button disables itself and reads **"Creating..."**, with duplicate protection at three layers. Two commissioners tapping "Start Day 1" at the same time can't produce two sets of rounds, and two groups can no longer be handed the same round code
- **Server-side limits:** 10 tournaments per hour / 40 per day per commissioner, and 300 invites per hour / 1,500 per day per sender

2 to 12 Teams

A tournament can run **anywhere from 2 to 12 teams**. Twelve is a hard ceiling.

Where you set it: *Manage* → **"Team names & logos"**, with a **"How many teams?"** picker at the top. Setting it to N draws N name rows, each with its own colour dot and logo slot.

Fun default names. A multi-team event pre-fills: **Shank Redemption · Bogey Nights · Fairway to Heaven · Putt Pirates · Bunker Mentality · Mulligan Militia · Grip It & Rip It · Turf Surfers · Sultans of Slice · Divot Dynasty · Driving Ambition · Par Bandits**. Type over any of them and yours wins, and there's a **"Use Team A, B, C... instead"** button to go back to plain labels. A classic two-team event keeps plain Team A / Team B — the funny names are for multi-team events only.

⚠ **Events created before 18 August 2026 may carry damaged team names.** Every team past A both displayed team B's name and saved into team B, so naming team G renamed team B. A live event was found with team B literally called "Team H". That's fixed, each row is colour-coded with its own team dot, a failed save says so rather than vanishing, and a stored name that's obviously another team's generic label is healed automatically. **Check your team names on any older event.**

Players auto-balance. Adding a player lands them on **whichever team is currently smallest**, so a fresh 16-player event self-fills eight pairs of two. **Auto-assign** deals a **serpentine draft** across every team — best player to team 1, then back down the order — so handicaps stay level.

The cart builder pairs teams two at a time — (A,B) (C,D) (E,F) (G,H) — so partners ride together and every cart is a natural two-team head-to-head. It used to filter to teams A and B only, which would have left teams C onward off the tee sheet entirely.

The Setup Wizard

- **Every step has a Close button now.** Step 0's dead **Back** became a real **Close**, and every other step gained one under the nav. Since v477 no step had a close button — the only exit was the ✕ pinned above the fold of a scrolling modal, which is unreachable once eight team cards are drawn
- **"Add players" is players only** — one flat roster of **name + handicap + remove**, and it points you at **Carts & teams** for placement. It used to group everyone under per-team headings with a team dropdown on every row, asking you to place all 16 players there and then again on the next screen
- **The Add New Player modal no longer asks for a team.** That field only ever listed Team A and Team B, so six of eight teams were unreachable. Players auto-balance; teams are set in one place
- **A blocked step tells you why.** **Next** stays greyed but is live, and naming exactly what's missing: "2 groups still need a scorekeeper: Group 2 and Group 4." / "3 players not in a group yet: Marcus, Corey and Julian." / "4 players still need a tee: Owen, MC, Marcus and 1 more." A disabled button fires no click at all, so tapping Next used to do literally nothing
- **Adding players is much faster** — a single database call instead of seven. Sixteen players went from about 6.8 seconds to 2.9

Assign Tees, Carts and Tee Times

- **Assign tees** appears on one-day and individual events, not just multi-day team events
- **Configure Carts** draws **one card per team (2–12)**, each with its colour stripe and dot, plus an **Unassigned** card so no player can be hidden. Past two teams the per-player "→" arrow becomes a **team picker**. It used to draw exactly two hard-coded cards, so in a four-team event teams C and D were invisible and their players looked unassigned
- Group size limit is **8**, a deliberate big group of 5–8 stays put instead of being force-split back into 3+3, and adding a 5th player doesn't spawn a second group. **"One group"** clears the day's groups and seats the whole field in Group 1. Empty groups auto-prune and don't block advancing the day
- Opening Configure Carts doesn't delete and rebuild the day's groups on render — that used to orphan live rounds and erase every tee time and scorekeeper. Use the explicit rebuild buttons
- Each group's box is a labelled **TEE** field, and headings read **Group 1 / Group 2 / ...**
- **🕒Tee Times** — a screen of its own in the event settings hub directly under Cart Configuration, subtitled "Each group's start time · auto-stagger", plus an **"🕒Tee times — optional"** button in the setup wizard. Set the first group's time and tap **Stagger** to space the rest out. It's day-scoped on multi-day events and **never blocks Start Event**. Open it before the day's date is saved and you get "Set the date first so the day is saved."
- **Withdrawals** — the player-withdrawal control is reachable (it existed but was never rendered, so a commissioner's only option was × Remove, which deletes the roster row and all group memberships). Withdrawing on a leaderboard-only day (stroke, quota) doesn't hand the other team a cup point, and **a withdrawal forfeit awards the point to the actual team** — any non-A withdrawal used to forfeit team B's point
- **A group of one** doesn't silently strand a player with no scorecard

Tournament Bets vs. Group Bets

Two clearly distinct screens with different accent colours:

- **"Tournament Bets"** — whole-field games the commissioner sets
- **"Group Bets"** — each foursome's own action

On Configure Day there are no per-bet player pickers — a tournament bet is a field bet, and participants are the whole field.

No game disappears without saying why. A main tournament game is **never hidden for a player-count reason**. It stays put, greyed, with the reason under it — "Needs an even number of players — the field has 15." / "Needs 4+ players — there are 2." Games that genuinely don't belong (not a tournament game, or the in-group twin of an Event Pot) still hide. (A tile could also reappear on screen still flagged disabled — looking available while ignoring every tap. Fixed.) **The Betting games header prints the running build number**, so a stale cached bundle is identifiable at a glance.

Configure Day keeps your work: your checked games, participants, and Nassau/Match instances survive backing out, **including leaving by tapping a bottom-nav tab**. Nothing is written to the event until you tap **Save Day**.

Per-day handicap allowance is settable by the commissioner on Configure Day. Group-level config stays locked out.

"Nassau isn't listed in my group's bets" is by design. Groups can't edit or shadow an event's games, so the event's game keys are hidden from the group's list. Change it at **Tourney** → **event** → **Configure Day** → **Games**, or **Event Pots** → **Nassau** for the field pot.

Day-game changes don't retro-fit an already-launched round. Adding or changing a day game after groups have launched only affects rounds launched afterwards. CTP is the one exception — each group's round heals itself when opened.

Team Quota Across the Field

Set the buy-in on **Configure Day** → **Team Quota** and pick the payout shape — **winner takes all, top 2 at 70/30**, or **top 3 at 50/30/20**. The maths shows live.

Worked example: 16 players at \$20 = a **\$320 pot**. Winner-takes-all pays the winning pair **\$160 each**. 50/30/20 pays **\$160 / \$96 / \$64**.

- Uneven teams refuse to settle, and the app names the team sizes. A **\$0 buy-in** pays nothing
- The field must be **evenly split** (8 v 8 works; 9 v 7 stops it settling entirely)
- **Field-wide quota totals used to dump every non-A team into team B's total** — a wrong number on a real-money pot. Fixed
- **A cart holding a third team used to silently drop that team's players** — 16 players reported as 14, their points never counted and their team never appeared in standings or got a share of the pot. Team sides are read from the **event roster** now rather than the round's two team slots, and **past events repair themselves on read** — no migration, nothing to re-enter

Where the standings show. Three surfaces, all fed from the same numbers that settle the money:

- The **Bets screen** under Tournament total, above the per-game breakdown
- The **round Bets sheet**, first item in the event block
- The **Event Leaderboard**, above the Payouts buttons, in a block headed **"Team Quota — points vs quota"**

Each shows rank, team dot and name, member names, points, and money once settled — with a "Still in progress" note or the pot size otherwise. **Every team in the event is listed, including ones with no scores yet.** Before this, nothing in the app told you who was winning a Team Quota event; you could only see money.

NOTE

Your foursome's Bets screen shows your group's points plus a line saying the Event Leaderboard is where it settles. Both screens used to show dollar figures for the same named bet, and they disagreed.

Cup Standings

Cup points are kept **per real team**. At **three or more teams** the tournament home cup card becomes a **ranked standings table**; at two teams it keeps the familiar head-to-head line. Every cart's local "A" used to be summed into one number and every local "B" into another, so a headline like **Team A 4 – 3 Team B** was meaningless in a multi-team event. The **lead-change chat post** names the leader out of however many teams are playing.

Event Pots

"Set up event-wide pots", subtitled **"Whole-field pools — separate from any group's own bets."** Each button shows a green **ON** or muted **off** tag.

The pots: **Low Net**, **Most GIRs**, **Fewest Putts**, **Long Putt**, **Tournament Skins**, **Tournament Nassau**, **CTP**, **Long Drive**, field **Stableford/Quota**, and the **Scramble Pot**.

NOTE

The "set up event-wide pots" chips that used to sit on the Event Leaderboard have been removed — Settings → Event Pots is the one place for them now.

⚠ **The menu warns when a pot is ALSO switched on as a day game**, listing the duplicates and stating that **the event pot is what pays**. The matching day game is suppressed so the bet can't settle twice (it used to move roughly \$190 where ~\$70 was intended). A day game with **no** matching event pot still settles exactly as before.

A field pot covers the whole event; a round-level pool covers only that group. If someone expects a field-wide Low Net, it has to be the **Event Pots** version, switched **ON**, with the right value.

There is no field-wide Birdie Bump. It's a group-level game only — each foursome runs its own.

Scramble Pot

Event Pots → **Scramble Pot** is the commissioner control for a field-wide scramble.

- **On/off, \$ buy-in per player, payout** (winner takes it, ties split — or 80/20), and **scoring** (gross, or net using the standard descending scramble allowance)
- The menu row shows a live summary, e.g. "\$20/player · winner takes it · gross"
- **How it pays:** each cart group is a team, teams rank by team total (low wins), **every player antes the buy-in** (so a 4-man team puts in 4× and an 8-man group isn't advantaged over a 3-man one), and it pays winner-take-all (ties split) or 80/20. Net scoring uses **25/20/15/10% of the four lowest handicaps on the team**
- It settles once every group is in, and shows on the combined board as **"Scramble (field)"**
- The modal carries the warning inline: **a scramble team plays one ball, so Skins, Low Net, Most GIRs and Fewest Putts cannot settle on a scramble day**
- No per-group resync is needed after changing it

Payouts

The Event Leaderboard has a **"Payouts"** section with **two** buttons — the same wording as the Bets screen's chips:

- **Tournament total** (always shown) — everything combined: every group's bets plus every event pot
- **Group total** (only when you're in a group) — just your own group

They navigate to the Bets screen with the right scope already selected. They used to open a second payout screen stacked on top of the leaderboard, with its own layout and its own share button — which is exactly why people got "different screens depending on what you hit". That stacked screen is gone, and a third option, **Tournament payout**, has been retired with it. Back always means back one step. Tapping **Tournament total** while playing your own round does **not** flip it into view-only — your round stays editable.

If you're not in a cart — a non-playing commissioner, or a spectator — the event's ranked money rows and who-pays-who lines **render inline on the leaderboard itself**, with the provisional note when groups are still out. No overlay, no new screen. You used to get a Tournament total button that dropped you into some other cart's board in spectator mode, with the chips reading "Group total" for a group you weren't in.

Total shows a live provisional board mid-event, with a small **"Provisional — X of Y groups finished"** notice above it. Every player in the event is listed, **even at \$0.00**.

Each pot renders as a **POT / WINNER / WINS** row with a grey detail line. Pots that can't settle until every group finishes show **still live / not settled** rather than a bare dash.

The settle-up text always sends both totals. A tournament round's **Text settle-up** sends the whole-event total — standings, per-game breakdown, who pays who — marked **⚠️PROVISIONAL** with a count of groups still out if it isn't final, and then **your group's own bets** labelled "already counted in the totals above" so nobody pays twice. It used to withhold the event-wide total until every group had finished, so a text sent while one cart was still on 17 carried the side bets and none of the event money.

Support note on mid-settlement totals: while an event reads **PROVISIONAL — 1 of 2 finished**, Skins, CTP and Long Putt are deliberately withheld, so the board will not sum to \$0.00 and cannot be compared against final figures. Once the last group finishes it balances to the cent.

Slow groups no longer freeze the pots forever. Long Putt, field Skins and CTP pay out once the last scheduled day is past, even if one group never finished. While it's still the scheduled day, the old rule applies — every group must finish — so a slow group finishing at dusk can still take a pot.

Tournament Results

"Tournament Results" opens the event leaderboard. Under **"Payouts"** there is now a shared block headed **"Field pots — who won what"** covering **CTP, Most GIRs, Fewest Putts, field Skins and Tournament Nassau**. Those five had **no display code on that screen at all** — the Bets screen showed them correctly, so the money was always right, but Tournament Results simply didn't draw them.

- **Long Putt is deliberately kept out of that block** and keeps its own richer section, which shows the mid-round leader (e.g. "leading, 1 of 3 groups finished")
- **Long Drive** stays commissioner-set with its **Set winner** button
- An event with no field pots shows no empty heading

Money Rules Worth Knowing

- **Cross-group bets are per-day.** The same pair matched on Day 1 and Day 2 used to settle only one match, sometimes using the wrong day's scores — that was the mechanical cause of "my total should equal my group bets plus my tournament bets but it's off"
- **Cross-group matches and Nassaus wait until they're actually decided** — a \$100 cross-group match used to book the full \$100 after one hole
- **Players are matched on full name**, not first name. Two Mikes used to collapse into one, and one Mike's winnings landed on the other
- **9-hole tournament days scale your handicap at launch** and pay out their field side pots
- **A field skins pot with no outright winner refunds or carries** — it used to charge everyone their buy-in and pay nobody
- **Whole-field Stableford/Quota pools pay out** even when a registered player never tees off, and a multi-day event charges every day's buy-in (it used to charge only the last day's, paying out about 11% of what it should)
- **No retroactive re-pricing.** Handicap, hole count and the day's allowance are stamped when the round launches, so changing settings later never changes a saved or finished round's money
- **"Final standings" uses the round-level money engine**, so it agrees with the in-round bubble and the group board; **field and event-wide pots appear on the separate payout board**. That's why the two screens show different numbers

Viewing Tournament Details

From the Tourney tab:

- See all upcoming tournaments; tap for **Leaderboard**, **Schedule**, **Teams** and **Rules**
- **"View my group's board"** always lands on a read-only Bets view
- **"Tournament Results"** opens the tournament leaderboard

Live during a tournament:

- **Leaderboard updates** in real time
- **Tap a player** to spectate their GPS
- **You get a push when your tournament group's round starts.** Recipients are matched by **account**, not by typed name
- **The field scorecard shows the whole field**, with real team letters, an Out/In split and net under gross. Entrants whose cart group never started appear as a dimmed dashed row labeled **"not started"** instead of vanishing
- **Large fields aren't truncated** — the leaderboard, whole-field standings, team standings, CTP and every field pot used to cap at 100 rounds with no ordering, so a 128-player 4-day event could lose up to 28 groups
- **Status pill accuracy:** an event where all launched groups are finished but some never teed off reads **"N groups not started"** with no live dot
- **Tournament data is visible only to its own members**
- **Finished public events drop out of "Public events you can join"**
- **Tournament notifications unsubscribe properly** — players used to get "Team Rhino takes the lead 4–3!" during unrelated rounds the next day
- **The leaderboard's refresh button works** on a one-day event that also has cup-format group results (two elements shared an id, so one refresh button was dead)

On a weak signal: the results board still renders, but toasts once that **"totals may be incomplete"** rather than showing a confidently wrong number. **Tournament chat** refuses to post and says the message wasn't sent, rather than replacing the entire chat history with a single message.

Finished Events Collapse

Finished tournaments render as a **single-line card**: thumbnail, event name, **"N days · tap for results & details"**, a **"Finished"** pill and a **"▼"**. Their group and round data isn't loaded until you tap, which is why the list opens almost instantly. **"▲ Collapse"** folds it back. Live and scheduled events stay fully expanded.

Past rounds on the Tourney tab open the same **Bets sheet** as Home.

Commissioners and admins see every group's card, each with its own Join / View-results button. Regular players see only their own group. A group's games line shows games configured **anywhere**, and cross-group **Match / Nassau** shows on **both** groups' cards.

Deleting a Tournament

Deleting an event marks it gone at the moment you delete it, and **that propagates to every other player's device** — on launch, and at most every 10 minutes while the app is open. Before, only the phone that pressed Delete knew, so everyone else kept seeing a trophy pointing at a screen that could never load.

Rounds and scores are never deleted. They just stop being listed under, and counted for, an event that no longer exists — see [Rounds From a Deleted Tournament](#).

Deletions accumulate rather than overwrite, so two commissioners deleting different events can't clobber each other, and a stale device can never un-delete an event.

Tournament templates have been removed. The Tourney tab's template card, **"Save as template"** and **"Use template"** are gone. Round templates (Play tab) are a separate feature and still work.

Smack-Talk / Trash-Talk Voice

Smack-talk voice adds spoken roasts and hype during the round. It's an **opt-in** toggle and runs per-phone. (Voice packs carry a PRO badge.)

Enabling Smack-Talk

Stats tab → **Round settings** → **"Smack-talk voice"** toggle.

- Toggle ON to hear spoken callouts on **this phone only**
- The voice fires at the **end of each hole** and speaks **at most one line per hole**
- Roasts fire on a **blow-up** (double bogey+ / 3-putt / double par); the single worst blow-up of the hole gets roasted
- A **birdie-or-better** triggers hype instead

The Roland Package (full Spanish)

A special package tied to the player **Roland** (recognized by name "Roland" / "Castillo"):

- **All of Roland's trash-talk is in Spanish**, spoken in a Spanish female voice
- **Birdie hype in Spanish**
- When Roland makes a birdie-or-better, his **photo pops up full-screen** (gated by Round pop-ups), and his hype takes priority over any roast that hole
- **Round-start announcement** in Spanish when a round with Roland kicks off
- Everyone other than Roland is roasted in **English**

Voice Picker

On the Round settings card there's a **system-voice selector** (default **"Default"**), populated from your device's installed text-to-speech voices. The chosen voice is used for the English lines; Roland always uses a Spanish female voice. Changing it previews immediately and persists on that device.

Birdie Hype & Photo

On a birdie with smack-talk on, spoken hype plays and a **crew highlight** is posted to the Home feed (unless pop-ups are off), with the player's photo, hole, course, and reaction buttons.

Crew Tab

The Crew tab is your player roster, your friend network and the **Live now** list. It's free — the whole social layer is.

Friends List

- Shows all **accepted friends**
- Tap a friend's photo for their **profile card**: handicap index & status, recent rounds & scores, "**View all rounds**", "**Invite to next round**", and (for guests with no email) "**Invite to claim these rounds**"
- **Add a friend**: the "+ Add" button opens "**Add a friend**" with a searchable crew list. Tap a player to send a request
- Search is smooth — debounced, no strobing, results only repaint when they change, and the box has autocorrect/autocapitalise off with a search key on the keyboard
- Where two accounts share an identical name, an unused duplicate (no rounds played and no sign-in for 60+ days) is **hidden**, so you only see the real person. A unique name is never hidden
- The button disables on tap so you can't send two requests and two pushes
- **Accepting and removing a friend now tell you the truth**. Accepting used to say "**Friend added**" even when the write failed, and removing a friend could silently fail and the person would reappear on the next load

Friend Requests

- "**Friend requests**" shows pending requests from other players
- **A red pill on the Friends header** reads "**1 request ▼**" / "**N requests ▼**" when you have pending requests. Tap the header to expand to Accept / ✕
- An in-app **friend-request pop-up** appears when someone sends one, and a badge appears on the Crew tab
- Accept and they appear in your Friends list; you can then invite each other to rounds, see each other on Live now, and read each other's posts on the crew message board

Live Now

The Crew tab's **Live now** list is where you watch a friend play — one row per live round, with **Spectate** and **Wager** buttons. (The Home tab's version of this card was removed; this is the one that stayed.)

Player Stats — All Eight Tiles Tap Through

Open a player's card → **Player stats** (this also works from the leaderboard player popup). **All 8 tiles are tappable**, including **Rounds** (their rounds list) and **Lifetime bets** (their bet history), plus GIR %, Fairways %, Putts, Avg score and the rest. A player with no data shows **N/A**.

Crew Management

- The **"Crew"** section lists all players ever in a round with you (your shared roster), sorted **A–Z**
 - Tap a player's row for their profile card
 - **The Crew leaderboard never shows a self-reported handicap** — a player with no computed index reads **"N/A"**, not their TEMP number
 - Leaderboard rows fall back to the person's account profile photo when their roster entry has no avatar
 - **Removing a player from the roster is an admin function** — see [Admin → User Management](#)
 - **View** on a completed round in a player's rounds list opens the **Bets sheet**
-

Common Workflows

Starting Your First Round

1. **Home tab** → "**Play now**" (or the middle **Play** button in the bottom bar)
2. **Search and select a course** — or accept the home course it already picked for you
3. **Pick your tees** — the dropdown shows rating/slope and yardage, and your handicap auto-sets
4. **"Select a Player"** to add your crew (up to 8) — team games balance themselves as you go
5. **Toggle the betting games** you want
6. **Configure rules:** Gross/Net, and Round Tracking (Putts, GIRs, Fairways, Penalties, Sand saves)
7. **"▶ Start round now"**
8. **Score tab** appears — enter scores hole-by-hole, or tap **"Say the scores"**
9. **GPS** opens when you tap the "Score" button
10. **Bets** shows the live leaderboard, the money and the settle-up
11. **"Save & return home"** when you're done — tap **"Reopen round"** later if something needs fixing

Watching a Friend's Round

1. **Crew tab** → **"Live now"**
2. Tap a friend's live round row → **Spectate**
3. **GPS opens in spectator mode** (read-only)
4. See their live location if they've shared it; scores update in real time
5. Tap the **player dropdown** to switch between players
6. The **×** puts you back on your own round, on the hole and tab you left

Checking What a Round Cost You

1. **Home tab**, **Rounds tab**, **Crew tab** or **Tourney tab** → find the completed round
2. Tap **View** — the **Bets sheet** opens
3. Read the group money, then **Settle up — this group**
4. Scroll for the full scorecard — gross with net underneath, **blue circles** are your group's skins, **gold** are tournament field skins
5. On a tournament round keep scrolling to the **event block** — the whole-event settle-up, the other groups' bets and **Tournament Results**

Reading a Payout Screen

1. Open the **Bets** screen, or **Payouts** on an event
2. Pick a scope: **Tournament total** or **Group total** — the chip governs everything below it
3. Each row is **POT / WINNER / WINS** — WINS is what the winner collects, not the pot size; the pot size is in the grey detail line
4. A column reading **still live / not settled** means that pot can't decide until every group finishes — it does **not** mean nobody won it
5. **"Running totals — not final"** over the settle-up means the round isn't finished yet
6. Tap **"Every bet — who won what"** for the one-screen document version, or **"Share this as an image"** (tap the image to zoom with the **- + Fit** buttons)

Settling Up

1. On the **Bets** screen, the settle-up card is the first thing you see
2. Tap **Text settle-up** — it always attaches the scorecard image and the bets card, and the message carries the who-pays-who lines and everyone's payment links
3. Each pay line carries one tappable link — the payee's preferred method
4. If groups are still out, the app warns you and the message carries a **△PROVISIONAL** banner
5. On a tournament round the text sends the combined event total no matter which scope is on screen

Adding Friends & Inviting to Rounds

1. **Crew tab** → **"+ Add"**
2. **Search** for a player
3. Tap their name → **friend request sent**
4. They see the request (and the red **"N requests ▼"** pill on their Friends header) and tap **Accept**
5. Once accepted, **"Invite to next round"** appears on their profile
6. When creating a round, tap their name in the player picker

Inviting to a live round: from the invite list, tap a friend to send a game invite. The button changes to **"✓ Invited — tap to resend."** When you **start a round**, anyone already added whose account is linked is **auto-invited**. The invited player sees an **"Game invite"** pop-up with **"Join now"** / **"Ignore."** Inviting from inside a tournament sends an **event link** — the joiner lands on the claim page and picks their own group.

Getting a Name-Only Player Into Their Own Tournament

1. Open the event → **Invite**
2. Send that player **their own link** (not a general share)

3. They sign in and tap their name
4. The spot, the handicap and every round already played on it stay attached — and the event now shows up on their phone and in their stats
5. **Don't rebuild the carts** — that only works at cart-build time, it needs you, and it does nothing if they have no account yet

Tracking Your Handicap

1. **Stats tab** → your handicap section
2. View your **index**, **status** (Established / Provisional / TEMP) and **recent differentials**
3. Tap " **Add past round**" to log rounds you played before using the app
4. Tap "**Share handicap**" to export your index + recent rounds
5. It updates automatically each time you finish or add a round
6. **Round missing?** Open the Rounds tab or Stats and it usually heals itself. If not, tap "**Resync my stats**". If the number still looks wrong after an app update, tap "**Recalculate handicap**"

Using the GPS Rangefinder

1. During a round, tap the "**Score**" button on the Score tab
2. **GPS opens** with a satellite view, auto-fit so the green is always in frame
3. **FRONT / MID / BACK** distances show center-top
4. **Drag the target marker** to your intended target — the map re-frames to keep both your ball and the target on screen
5. **Wind panel** (☉ icon) shows direction and speed
6. **Club suggestion** (Plays-Like mode) — tap to switch from Plays-As
7. Check the right-hand bubbles for this hole's **Pot of Gold** value, **Long Putt**, the **LEADER** net bubble, the **Team Quota** standing and your match status
8. Tap "**Track Shot**" to log a drive distance
9. Tap "**Score**" to close GPS and enter the score

Marking Junk Bets on Scorecard

1. On the scorecard, scroll to the **Junk row**
2. Toggles for GIR, Sandy, Rolo, Barkie, Polie, Snake, Arnie, Chip-In
3. **Tap a player's name** to toggle them for that junk on that hole
4. Multiple players can score the same junk
5. **GIR, Sandy, Rolo and Chip-In fill themselves in** when the round tracks GIRs, Sand saves, Penalties and Putts — and a manual tap always overrides

6. At round end it **auto-settles**

Running a Multi-Team Event

1. **Tourney tab** → **" + New event"** → pick a type. For pairs, pick **Small Teams (2-man)** and set how many teams
2. **Add players** — one flat roster; they auto-balance onto the smallest team
3. **Team names & logos** → set **"How many teams?"** (2–12), then name them or keep the defaults
4. **Carts & teams** — one card per team; **auto-assign** deals a serpentine draft, and the cart builder pairs teams (A,B) (C,D) so every cart is a real head-to-head
5. **🕒 Tee times** — set the first group and tap **Stagger**
6. **Configure Day** → **Betting games** — set the day's games; a greyed game tells you why it can't run
7. **Configure Day** → **Team Quota** — set the buy-in and the payout shape (winner takes all / 70-30 / 50-30-20)
8. **Event Pots** for anything field-wide
9. **Start Event**
10. Watch **Team Quota standings** on the Event Leaderboard, and **Payouts** → **Tournament total** for the money

Managing Your Club Distances

1. **Stats tab** → **"My clubs"**
2. One input per club — enter a **distance range** in yards, customize the label, leave blanks for clubs you don't carry
3. **Drag ⋮ to reorder**
4. **"Reset to standard bag"** restores defaults
5. Next round, GPS club recommendations use your distances

Glossary

NOTE

New since the last edition: the Bets screen (formerly Board); per-tee par; the home course and the home/away badge; 2–12 team tournaments and Small Teams (2-man); Vegas switch-at-the-turn; Team Quota as a pot; gross-and-net per nine; "Running totals — not final"; the single Text settle-up button; Resync my stats; the global snapshot; and the retirement of Abandon round, Live Holes Across America, tournament templates and the Home Live now card.

Term	Definition
Handicap Index	Your WHS rating (one decimal); based on the official USGA count of your best differentials from the last 20 rounds, capped at net double bogey
Differential	$(\text{Score} - \text{Course Rating}) \times (113 \div \text{Slope})$; measures difficulty of a specific round
Course Handicap	$\text{Index} \times (\text{Slope} \div 113) + (\text{Rating} - \text{Par})$; your handicap adjusted to a specific tee. Skins and the pots measure off this, not the raw index
Published handicap	The index your account publishes so every device shows the same number for you
Provisional	Status when < 5 rounds played; the calculation is valid but temporary
TEMP	A handicap you typed at sign-up rather than one the app computed. Marked everywhere — and never shown on the Crew leaderboard
PRO badge	A gold pill marking a future Bad Golf Pro feature. Nothing is locked today , and early members keep 90 days of Pro free after plans launch
Handicap allowance	A per-game percentage of your course handicap. On Skins and Low Net Pool it replaces the round's percentage; on the stroke pot it still stacks
Per-tee par	Where a club publishes different pars for different tees, each player is scored against their own tee's par and stroke index. The hole header shows e.g. 4 / 5
Home course	The course you normally play. New rounds default to it, and every round is stamped home or away
GIR	Greens in Regulation; ball on the putting surface in par – 2 shots
Stroke Index (SI)	1–18 ranking of holes by difficulty (1–9 on a nine); used to allocate handicap strokes
Net / Gross	Score with / without handicap strokes. Every scorecard shows both on Out, In and Total
Bets screen ()	The money surface — settle-up, standings, per-game breakdown, scorecard, game results. This is the tab that used to be called Board
Bets sheet ()	The same layout opened from a finished round via View
Running totals — not final	The stamp on settle-up while a round is unfinished; the numbers can still move
Best Ball	Team format; each player plays their own ball, the team takes the lower score per hole
Scramble	Team format; everyone hits, the team picks the best, repeat (one team score per hole). Scored against the card par
Scramble Pot	

Term	Definition
	The field-wide scramble pot, set under Event Pots — every player antes and cart groups are the teams
Nassau	Three separate bets (front, back, overall). Ties carry to the next segment
Huckle	The Nassau press — available when you're down 2+ in a segment, in stroke play or match play
Skins	Lowest score on each hole wins that hole's pot. Per skin or Pool format
Field skin	A tournament-wide skin — circled gold on the scorecard (a group's own skin circles blue)
Vegas	2v2 format; scores paired (low digit first) not added; tie-doubling is capped. Teams can rotate every 6, stay fixed, or switch at the turn
Hammer	Match play with a doubling cube — throw the hammer to double; accept or fold. Team (2v2) or Individual
High & Low	2v2; a point for the better low ball and a point for the better high ball each hole. Needs an even field
Animals	Penalty animals (Gorilla, Snake, Shark, Camel, Jackal, Dolphin, Crab) pass to the last offender; only the final holder pays
Marks	Highlight-reel game — most marks wins (GIRs, sandies, chip-ins, fishies, darts, muscles, birdies)
Hot Potato	One token that doubles each time it changes hands, capped at 64x ; whoever holds it after 18 pays
Umbrella	2v2 points game; five points a hole, each worth the hole number; sweeping all five doubles the hole
Pot of Gold	A pot on every hole, $\text{base} \times (19 - \text{stroke index})$. A \$1 base totals \$171 per opponent over 18
Team Quota	Teams play (points – quota); a buy-in pot , not a per-point game. In a tournament it settles once across the whole field
Round pool	A whole-group pot — Low Net Pool , GIR Pool , or Fewest Putts Pool . Everyone antes; best result takes it; ties split
Junk	Side bets triggered by specific outcomes (GIR, Sandy, Rolo, Barkie, Polie, Snake, Arnie, Chip-In)
Rolo	Par or better after taking a penalty stroke. Auto-fills when the round tracks Penalties

Term	Definition
Chip-In	Holing out from off the green for par or better. Auto-fills when putts = 0 and the score is par or better (an ace doesn't count)
Par 3 Greenie	Closest to pin on par 3s; optional Hero Tax , or the "3-putts still win" mode that removes both
Hero Tax	Penalty: if the Greenie winner 3-putts, they forfeit the payout AND pay each player
Birdie Bump	Automatic payout for birdie/eagle/ace from each player. A group-level game only — there's no field-wide version
Closest to the Pin	Mark the winner on qualifying holes; log distance in feet & inches. Optional pool mode
Long Putt / Long Drive	Everyone antes; the longest putt of the round / longest drive on the designated hole takes the pot
POT / WINNER / WINS	The payout row format. WINS is what the winner collects , not the pot size
Still live / not settled	A pot that can't decide until every group in the event finishes — not "nobody won it"
Provisional (payouts)	An event total shown before every group has finished; Skins, CTP and Long Putt are withheld, so it won't sum to zero
Fairway Center	Ideal landing zone (green dot on GPS) for par 4s/5s
Complete (course)	Pars set, tee ratings/slopes filled, GPS mapped, par-4/5 targets placed, passing the duplicate-pin, misplaced-mapping and scorecard-trust gates, and carrying no live code-review rejection
Code Review / Code Review Reject	Kevin submitted a fix for us to review / we sent it back for more work. A course's bucket follows its latest entry
State Lock	An admin freeze on a completed state — blocks all admin data writes, never affects play
Guest claim	A host-initiated link that moves a guest player's rounds, handicap and money onto that person's new account
Bound invite	A join link tied to a specific player slot — the joiner confirms once and is in, with no typing
Tee time	A calendar reservation on the Times tab: a course + date + time + a group size
Niners	The 9-point game for exactly 3 players — 9 points per hole (low 5, mid 3, high 1)
Blitz	Niners option: win a hole outright by 2+ strokes and sweep all 9 points

<i>Term</i>	<i>Definition</i>
<i>Payment handles</i>	<i>Your Venmo / Cash App / PayPal for one-tap settle-up; only your playing partners can see them, only to pay you</i>

Tips & Tricks

Make the Most of GPS

- **Before your round:** set up My Clubs with your real distances
- **On each hole:** drag the target marker to your intended shot to see club recommendations — the map re-frames so you never lose it off-screen
- **Wind mode:** turn on wind visualization to see how direction and speed affect the ball
- **Watch the bubbles:** the Pot of Gold bubble tells you what this hole is worth before you tee off — the No. 1 handicap hole is the big one. In a tournament, long-press the Team Quota bubble to see every team
- **Track drives:** tap "Track Shot" after big drives to refine your club setup over time
- **Pinch to zoom** works everywhere, which helps a lot in bright sun

Turn On the Right Tracking

- **Putts** unlocks Chip-In auto-fill — and **Arnie won't award at all without it**
- **Penalties** unlocks Rolo auto-fill
- **Sand saves** unlocks Sandy auto-fill
- **GIRs** unlocks the GIR junk bet and the two Umbrella GIR points
- Adding the **GIR Pool** or **Fewest Putts Pool** switches the matching tracker on for you — you'll see a toast saying so

Set the Handicap You Actually Meant

- **Skins and Low Net Pool** each have their own allowance slider, and it **replaces** the round percentage. $90\% \text{ round} + 80\% \text{ skins} = 80\% \text{ skins}$, not 72%
- **0%** on either slider means that game plays **straight gross**
- **The stroke pot is the exception** — its allowance still stacks on the round percentage
- The **stroke dots on the scorecard** show the round-level pops, so they can legitimately disagree with a Skins result. That's expected
- **Set your gender in Edit profile** if you play the women's tees — it's what makes the rating/slope and per-tee par work in your favour

Run Smooth Rounds

- **Set your home course** — every new round starts on the right course and every round gets stamped home or away

- **Your setup is saved for 30 minutes** — back out to check something and your course, players and options are still there. Your game selections deliberately aren't, so a new round always starts clean
- **Save your setup as a template** — tick **"Save as reusable template"**; **"Use"** spins up a fresh copy. Templates are private to you
- **Create a friends list** (Crew tab) so invites are one-tap and your Home feed is just your crew
- **Removing a player is a confirmed action** — the dialog names them and tells you exactly what gets deleted. Read it
- **Watch for the amber sync bar.** If it appears, your scores are safe on the phone and the round just hasn't reached the cloud yet — tap **Retry now** when you have signal
- **Made a mistake?** Tap **"Reopen round"**, fix it, and finish again — every payout recalculates and the corrected card reaches your stats. Just make sure only one person edits at a time
- **Re-check per-hole winners** (greenies, junk, CTP, long putt) if you edited a live round's bets

Settle Money Fairly

- **The Bets screen leads with settle-up** — it's the first thing on the page now
- **The scope chips drive the whole screen** (Tournament total / Group total), not just the money rows
- **Tap "Every bet — who won what"** when someone disputes a number — it's exactly what the texted settle-up sends, and it respects the chip you're on
- **One share button. Text settle-up** always attaches the scorecard and the bets card, and includes everyone's payment links
- **Tap an image to zoom it** — use the **– + Fit** buttons; a normal pinch won't work
- **Don't compare a PROVISIONAL total to a final one** — Skins, CTP and Long Putt are deliberately withheld until every group finishes
- **Add your payment handles** (Additional settings → Payment handles) so your buddies can pay you in one tap
- **Junk auto-settles** — don't calculate greenies, sandies and Rolos by hand

Run a Big Event

- **Pick the right event type first** — Small Teams (2-man) sets up a pairs field in one step
- **Let the app balance the teams** — auto-assign deals a serpentine draft so the sides are level, and the cart builder pairs teams so every cart is a real head-to-head
- **Name your teams** under Team names & logos — and **if your event predates 18 August 2026, check them**, because team names used to overwrite each other
- **A greyed-out game tells you why** — read the line underneath rather than assuming it's broken
- **Team Quota needs an even field** (8 v 8, not 9 v 7), and the standings are on the Event Leaderboard
- **Send name-only players their own invite link** so the event shows up on their phone

- ***The event pot is what pays*** when a pot is on as both a day game and an event pot — the day game is suppressed so it can't settle twice
